# 59<sup>th</sup> YALGOO BULL SALE

In conjunction  
with *Ivy Bank*

**45 Stud Bulls**  
ALL SALE BULLS SEMEN TESTED

**13 Stud Heifers**

Videos of all lots available July 15th | Poll status available now  
[yalgoogenetics.com.au](http://yalgoogenetics.com.au)

**Monday 10th August 2020**  
Commencing 1:30pm

*Light refreshments available at the sale.*

JBAS Status - Yalgoo has level 7 JBAS accreditation  
Serving Ability tested: 18/5/20

Sale Details: A rebate of 2% will be paid to outside agent introducing approved buyers in writing, 24 hours prior to commencement of the sale, accompanying them and settling within seven days of the sale.

This sale is interfaced with AuctionsPlus and will be conducted live online in real time. Bidding is available only to registered AuctionsPlus users. To bid you must register, preferable 24hrs before the sale. Contact AuctionsPlus on 02 9262 4222 for more information

# WELCOME to YALGOO 59th Performance Recorded Sale Your Carcase Choice!

**THANKYOU** for taking time to consider the Yalgoo program. We take our responsibility of adding genetics to your herd seriously. We strive to offer a complete program that covers all aspects of beef production.

We provide:

- ✓ Sound, functional bulls carrying superior genes
- ✓ Industry best quality assurance including:
  1. Independent structure and fertility testing on sale bulls
  2. Serving ability test on sale bulls
  3. Genotyped bulls
  4. Bluestar pre-sale vaccination program on sale bulls
  5. Semen tested bulls
  6. High data integrity (4.5 star Breedplan rating)
- ✓ Commercially, acceptable phenotype
- ✓ Unique bull depreciation model to control bull costs
- ✓ Industry best practise approach to herd management to amplify selection pressure

The new year breathed new life into our industry. General rain has moved the ECI to historically high territory. The combination of good seasons and high prices account for nearly 100% of the profit in a beef enterprise. If you fed through the drought you are in the box seat to realise this combination.

COVID 19 – Please note we will be complying with Australian recommendations regarding our sale day. If you are concerned, please do not hesitate to contact us before the sale and we will show you around the bulls. This will also be a good opportunity to discuss your direction and ensure we are delivering the best bull for your program. Video's, independent structural/muscle scoring, genotyping, EBV's, AUCTIONSPLUS are all provided if you would prefer to bid remotely. We will be posting updates on our website and facebook page regarding COVID as the sale approaches.

One thing I can guarantee is if you are going to invest in bulls this year, ensure they are from a genetic source that is making demonstrable genetic gain over an extended period. Over the past 7 years Yalgoo has averaged nearly \$10 of genetic gain per generation. **This is nearly 1.7 times the rate of gain of the average Hereford herd.** Due to the cumulative nature of genetics this will result in an Internal Rate of Return on these genetics of more than **2 times that of a breed average** producer. Extensive genotyping has been undertaken on 2020 sale bulls. Along with high data integrity, genotyping will ensure you are getting a more reliable and predictable genetic package.

**R & D:** Yalgoo was fortunate to be one of the few seedstock herds involved in the Trans – Tasman Beef Cow Productivity Project. Matt Wolcott from AGBU has provided a summary of the project. Please go to Age of Puberty document in this catalogue to learn more.

**IMPORTANT:** Lot's 1-6 were used in herd at Yalgoo. Lot's 1-3 were sent to Western Victoria at the end of November with 100 yearling heifers. They were joined at around 450kgs at 14 months of age. They came back pretty light due to the heavy workload at a young age. You will need to take this into account in your visual appraisal when comparing with the other bull's that have been going forward their whole life. The genetics in these bulls are some of the very best we have offered.

Lot's 4-6 were used in a syndicate over mature aged cows and achieved a conception rate of 95% over the peak of their drought, which was a strong result considering the circumstances. It certainly gives us faith the long term genetic and managerial pressure on fertility is building a more resilient and fertile herd.

We urge you to take a close look at these lots. They are proven and their sexual experience will ensure that they get more calves in the first cycle, which means more kg's come sale time, a tighter calving spread and higher overall herd fertility. Lot 4 looks to be an industry herd sire.

We have decided to offer 13 special P heifers. These females represent some of the highest performance genetics in the breed. They have superior dams, pedigrees and phenotypes.

There are numerous female lots that have the potential to be donor dams and improve breeding programs. Please contact Jock for more information on these heifers.

All lot's will be videoed on the 12th of July and Video's will be available soon after on the HAL, Auctionsplus and Yalgoo websites.

Bull costs can be a major contributor to cost of production. The cost of genetics has been extreme in the past few years. Bull cost's per calf of \$200+ per calf haven't been uncommon. The investment risk of genetics is such that-

- ✓ The payback period is long and generally covers high and low beef cycles.

The only way to control this risk is for the bulls to last longer. This amortises your financial investment by producing more calves per bull and lowering the cost per calf born.

If you are buying Yalgoo bulls, our data demonstrates you will likely be producing **a weaner calf 30 cents/kg cheaper than that of an Angus bull. 30 cents a kg!!**

Along with cost of production - production is the most profit sensitive KPI (please see Holmes and Sackett beef summary at the end of the catalogue). Due to price cycles, we need to ensure we are at a high level of production so we can capture price spikes when they occur (nearly 100% of beef profits are made from the best 3 years in a decade). One of the key components of production is genetics. Genetics that allow you to run more moderate cows that:

1. Don't eat you out of house and home
2. Have more calves:
  - a. That grow quickly
  - b. Meet market specifications

They say that we get better through adversity. I think the 20-teens drought has certainly proven this adage with our cow herd. Large cows have drafted themselves out through this period. Not only through infertility but for diseconomies

of scale. A large frame cow costs 20% more than a moderate frame cow. In a 500 head cow herd over 12 months on current feed prices this is \$200 000 more. Ask yourself can this big cow produce enough income to justify this? I believe the commercially disciplined seedstock sources from the north will move the mark for efficiency and fertility because of the drought we have just been through.

Regarding phenotype, 2017, 2018 and 2019 have presented serious seasonal constraints at Yalgoo - the worst on record. The bulls were supplemented until February and have since had the unique privilege of eating grass!! In their recent vet check, there was very little bursitis, which means they should remain sound for longer. Overfeeding has the potential to increase the value for the seller but never the purchaser.

In the bull notes for each lot I have again included recommendations on market/production system suitability. Please note the two new categories of Multi-purpose and Heifer Bulls. A summary of these recommendations is included within the catalogue.

2020 represents an opportunity to invest in some of the most proven, performance genetics in the breed. Prominent sires are Koanui Techno, Injemira H6, Churchill Kickstart and the exciting new sire - Hunter Lakes Lancelot.

We are excited about the future of the whiteface breed. It's weight for age, efficiency and temperament are crucial profit driving traits. It's place as half of the most profitable beef animal (black baldy) in temperate Australia ensures its market share will increase. The Angus breeder's that are bold enough to trial some hybrid vigour will be duly rewarded with increased profitability by using contemporary, high performing Hereford genetics (Please see More Bang for your Black page for recent research on breed composition).

They say to have enjoyed your work is to have had a good life. The enjoyment that comes with working with the industry's quietest breed is reinforced every day we handle our cattle. Our cross- breeding client's, all say the same about our cattle. In a recent US beef survey, temperament was the number 1 trait of importance. If you want more enjoyment as well as more profit out of your beef herd, I encourage you to consider a Yalgoo bull.

Interestingly as the beef price has risen the pure-bred cattle have been proportionally discounted. For example, at an average price of \$2.00/kg, the Angus premium was around 5%. However, at the higher \$3.00/kg the Angus premium has shrunk to about 3%. Heterosis is fixed and exclusive to market trends, it remains at 10 -15% depending on how many breeds are in the mix. At average beef prices the production premium from cross breeding is \$100+ on a 550-500kg feeder steer. This is exclusive of the many maternal benefits cross breeding offers. It has never been a more profitable time to cross breed. (Please see 'price consequences of high beef market' within the catalogue for more information).

We would like to thank everyone who has supported our first half-century of sales. We look forward to seeing you at our 59th. Stay safe.

**IMPORTANT NOTE: The guarantees/ production protocol provided within this catalogue are applicable to Yalgoo bulls only. Please speak to Alan Green for Ivy Bank protocol.**

# Does a higher beef price equate to a proportionally higher return for all beef producers?

I ask you to consider these following simple sums:

## Assumptions:

2013 feeder steer price: \$2.00/kg

Angus Premium: 10 cents

Heterosis: 10%

2013	Angus	Black Baldy
Steer Weight (kg)	500	550 (10% Heterosis)
Price (\$/kg)	\$2.00	\$2.00
Premium (cents)	10	0
Gross (\$)	\$1050/hd	\$1100/hd
Income/100hd	\$105 000	\$110 000
Income difference/100hd	<b>-\$5000</b>	+\$5000
Income differential (%)	<b>-2.4%</b>	+2.4%

## Assumptions:

2016 feeder steer price: \$3.50/kg

Angus Premium: 10 cents

Heterosis: 10%

2016	Angus	Black Baldy
Steer Weight (kg)	500	550 (10% Heterosis)
Price (\$/kg)	\$3.60/kg	\$3.50/kg
Premium (cents)	10 cents	0
Gross (\$)	\$1800/hd	\$1925/hd
Income/100hd	\$180 000	\$192 500
Income difference/100hd	<b>-\$12 500</b>	+\$12 500
Income differential (%)	<b>-4.8%</b>	+4.8%

If we consider the initial question, then the answer is no. The black baldy producer is getting rewarded more than 2% extra over the pure bred producer in a high beef cycle. When the beef price is very low, a little bit of a premium can be helpful. However, when the price is historically high then production becomes increasingly important.

This is because regardless of what the market is doing; the fundamental profit drivers of beef production don't change. Fertility and weight in conjunction with stocking rate, drive profit faster than anything else.

Depending on how many maternal benefits you include in your heterosis, you gain a minimum of 10% in a two way breed split. This is fixed.

## There has never been a more important time to be cross breeding.

Where as we can see in the example above; the price premium is not fixed and actually diminishes as the beef price goes up.

In conclusion when the feeder steer price is \$2.00/kg live weight, the pure bred producer needs a price premium of 20 cents/kg to break even with the black baldy producer.

When the feeder steer price is \$3.50 /kg live weight, the pure bred producer needs a price premium of 35cents/kg to break even with the black baldy producer.

# GET MORE !BANG! FOR YOUR BLACK

## Heterosis: You are getting taxed if you don't utilise it

### What is it and what does it do?

- Heterosis, hybrid vigor, or outbreeding enhancement, is the improved or increased function of any biological quality in a hybrid offspring. Achieved through the mixed genetic composition of parental genetic makeup
- Heterosis accelerates lowly heritable traits, that are not easily/quickly achieved in purebreds
- The following results are based on US research studies using genetically breed average Hereford bulls over Angus cows Vs genetically breed average Angus bulls over Angus cows

### Why we need it?

1. F1 cow is 8% more efficient than pure bred cow (transforming grass milk) (USMARC)
2. F1 cow lives 38% longer than pure bred (USMARC)
3. F1 cow has 25% more production in kilograms of calf weaned (USMARC)
4. F1 female reaches puberty before a pure bred (MSU study)

### Cost and Income Benefits

- Result: F1 female lives longer & is more fertile therefore there is a decrease in replacement costs
- Result: F1 female has an advantage in pregnancy rates of 7% (H R Heterosis Project)
- Result: F1 female more likely to get in calf as a two year & will produce more calves in her lifespan than a pure bred
- These attributes result in a 10% cost saving on cow production costs over a pure bred herd (US MARC)

### Health Benefits of Heterosis

- Genetics control immune response and immunity
- Pure bred doubles up more of the undesirable immune-response genes (in breeding)
- Crossbreeding ensures more genetic diversity and optimal immune response
- Thus, a crossbred cow tends to have more optimum immune system function than a straight bred cow
- Results in a healthier mum producing better colostrums which results in a healthier and heavier calf (decrease in infant immune diseases and subclinical losses)

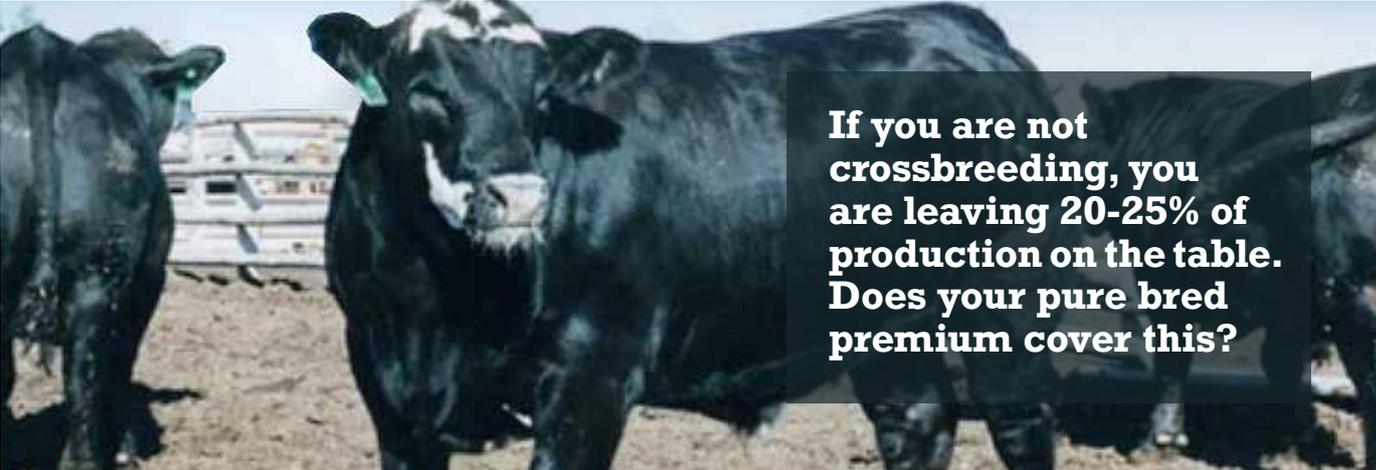

### Real World Proof: Recent Studies

- Profitability studies undertaken on the merits of cross breeding in the leading purebred black herds of Simplot Livestock Co., Lacey Land and Livestock, Harris Ranch and Circle A Angus in the US
- All studies showed a marked increase in income of the Hereford sired progeny over the pure black progeny
- Harris Ranch findings: Through the first year of the multiyear study, the crossbred calves had a \$78/head advantage, compared to their straight bred peers (Table 1). There was a slight advantage to the crossbred (\$10.80/head) for increased weaning weight, but most of it came through feedlot and carcass performance.
- The Hereford-sired group had a definite advantage in average daily gain, dry-matter feed conversion and, ultimately, cost of gain compared to the Angus-sired group.

Traits	Angus Sired	Hereford Sired
Ranch		\$10.80
Back ground		\$14.10
Pre Feedlot		\$24.90
Feedlot		\$86.10
Carcase	\$33.27	
Feed lot and Carcase		\$52.83
Net Value Difference		\$77.73

Study conducted by Dave Daley and Sean Earley, California State University-Chico; cooperators are Lacey Livestock, CA; American Hereford Association; Harris Feeding Co.; Harris Ranch Beef Co.

If you need assistance in implementing a black baldy cross breeding program please contact Yalgoo or Herefords Australia.

**If you are not crossbreeding, you are leaving 20-25% of production on the table. Does your pure bred premium cover this?**

# MARKET/PRODUCTION SYSTEM SUITABILITY

## **AIM**

To assist you in selecting bulls; for your specific production system or target market.

## **RATIONALE**

Although indexes are an important indication to the suitability for a specific market there are other factors that will determine whether that bull's progeny will be best fit for a specific market.

We have combined the genotype and phenotype to form our recommendation.

## **METHODOLOGY**

Recommendations are our subjective opinion of the suitability of a certain bull for a specific market/production system.

We have used a combination of maturity type, Indexes, EBV's, visual muscle content, feedback from clientele/processors and raw data to form our recommendations.

## **DESCRIPTIONS**

### **SM = Supermarket Trade**

To form our SM recommendations we have primarily used processor feedback.

For a bull deemed to be suitable for the SM trade he has to have a favourable combination of visual muscle, maturity type and SM index.

### **MSA = MSA Compliance driven markets**

To form our MSA recommendations we have primarily used the June SBTS Tech talk document: "Meat Standards Australia Breeding: for Improved MSA Compliance & Increased MSA Index Values"

A bull recommended for MSA compliance markets must have a favorable combination of the following traits:

- temperament
- fat EBV's
- 200 400 600
- IMF
- carcass weight
- visual muscle

### **F = Feeder Animal**

To form our recommendations we have primarily used feedlot feedback/acceptability of Yalgoo and Yalgoo client's cattle. As well as conducting our own market research.

A bull recommended for use in a system producing feeder steers will have a favorable combination of maturity pattern and the GN index.

### **EU = EU Market**

To form our recommendations we have primarily used feedlot/processor feedback/acceptability of Yalgoo and Yalgoo client's cattle. As well as conducting our own market research.

A bull recommended for use in a system producing animals for the EU market will have a favorable combination of maturity pattern and the EU index.

### **HGS = Heavy Grass Finished Market**

To form our recommendations we have primarily used processor feedback/acceptability of Yalgoo and Yalgoo client's cattle. As well as conducting our own market research.

A bull recommended for use in a system producing animals for the HGS market will have a favorable combination of visual muscle, maturity pattern and the GS index.

### **BB = Black baldy**

To form our BB recommendations we have primarily used client/consultant feedback.

Use the Grain Fed Index to select for bulls suitable for a BB herd.

AS well as the GN index; for a bull deemed to be suitable for a BB production system he must a specific balance of traits. This is not to suggest that other bulls won't fit into a BB herd. However, following consultation with existing BB producers it was determined that this balance will be the most profitable in a system using stocking rate as its primary profit driver and producing a 480-520kg black baldy feeder steer in temperate Australia.

### **W = Weaner Producer**

To form our recommendations we have primarily used market research. A bull recommended for use in a system producing animals for the W market will have a favorable combination of maturity pattern and 200 day growth.

### **HB = Heifer Bull**

To form our heifer bull recommendations we have primarily used the genotypic calving ease traits of CEDIR, BW, GL as well as the phenotype and pedigree of the bull

### **MP = Multi Purpose Bull**

These bulls are suitable for cows and heifers. To form our recommendations the bulls need to have a favourable combination of genotypic calving ease and growth traits

For more information regarding recommendations, ring Jock on 0497 762 977

# YALGOO BULL QUALITY ASSURANCE

## Bull costs and their impact on profit.

The primary role of a bull is to get live calves at a reasonable cost. The cost of a calf sired is a direct result of the longevity of the bull and the price paid for the bull.

1. **Structural integrity**
2. **Libido**
3. **Pre sale and post sale management**  
(incl nutrition & disease management)
4. **Genetic merit of a bull**
5. **Temperament**
6. **Resilience**

## BACKGROUND INFORMATION

Bull failure through breakdown or infertility is a major industry issue. Independent studies have suggested it could be around the 30% - 40% per annum across the industry. Problems often arise between the bull supplier and client as to compensation for a bull failure which is quickly compounded by empty cows. At Yalgoo we are determined to offer industry best practise regarding BULL QA.

Even more of a financial threat is purchasing a bull that is never going to get cows pregnant. Bull Quality assurance was revolutionised in the late 1970's and 80's through work done by Dr. Mike Blockey. After testing thousands of commercial bull's of all ages he showed that 25% of bull's tested were unfit for service. He then developed a protocol to ensure these bull's would be identified before they were sold. This was known as the Serving Ability Test (SAT). Industry uptake was good through the 90's, however it seems there is an industry trend away from bull testing again. Disturbingly this means that around 1 in 4 bulls will again be entering the Australian beef herd unfit for service.

New Zealand research by Greg Tatersfield suggested 28% of commercial working bull's are unfit for service. And the Holmes and Sackett research suggested 18% of young bull's are unfit for service. If you are purchasing untested bulls, how would you know? Serving Ability Testing, although laborious is the definitive test we have to ensure bull's are going to be able to fulfil their primary role.

The other advantage of Serving Ability Testing is to give the bull sexual experience. With sexual experience under his belt, he is more likely to get more cows pregnant in the first cycle. This increases the pressure put on herd fertility as well as having management benefits. Most importantly it means more weight in progeny at sale time which means more income.

**At Yalgoo we offer a pre-sale protocol that is industry best standard.**

Our program is as follows:

- **ALL YALGOO SALE BULL'S HAVE BEEN SEMEN TESTED**
- **INDEPENDENT STRUCTURAL ASSESSMENT.** Bulls and females are independently assessed for structural soundness and temperament, by Dr. Phil Holmes and/or Jim Green
- **NO HOOF TRIMMING.** There has been no hoof trimming on Yalgoo for 20+years
- **VET CHECKED.** All bulls are vet checked by Dr. Phil Holmes. Yalgoo sale criteria states that all bulls must measure 32cm or larger for testicle circumference at 400 days. Hocks, feet, penis and jaw structure are also examined. All bulls are scored for testicle tone and any bulls with abnormalities are culled
- **TESTICLE TONE SCORED.** To semen test or not to semen test? Research has shown that if testicles are firm, springy and of adequate size then the bull has a 98% chance of delivering good quality semen. Because semen quality rises and falls ad infinitum, semen testing is not the ideal method to get an overall picture of the bull's potential to deliver quality semen year round. For more information please contact us
- **SERVING ABILITY.** All Yalgoo bulls must pass a service ability test to ensure they can serve a cow before leaving Yalgoo
- **PFIZER BLUE STAR.** All sale bull's are tested to ensure no Persistently Infected animals with Pestivirus are sold. All bull's are vaccinated according to Blue Star protocol
- **FEEDBACK:** To further improve our bull QA we need your help! With the bull you have purchased you will receive an audit of performance. We encourage you to fill out this when/ if a problem arises with your bull, and get it back to us. We will use this information to improve our bull QA to ensure our bulls last longer. Everyone in the bull supply chain will benefit from these records.
- **WARRANTY:** Bulls are depreciated over their working lifetime. This results in a stable calf cost for the purchaser. Please speak to Jock regarding the functionality of this warranty.
- **CLIENT GUIDANCE FOR BULL QA:** Please speak to us if you require any assistance in developing your own protocol to ensure your bull's are fit for service each year pre-joining. As your bull ages the likelihood for him being unfit for service increases. i.e. A 6 year old bull is 4 times more likely to be unsound for breeding than a three year old bull.

# AGE OF PUBERTY TRIAL/ EBV

**Yalgoo has partnered with nine other seedstock herds, Herefords Australia, Angus Australia and with scientists at AGBU, in an MLA funded research project examining the genetics of age at puberty in temperate beef breed heifers.**

Age at puberty was assessed in 3,000 Angus and 1,000 Hereford heifers by regular ultrasound scanning, from weaning to synchronisation for AI, to detect first oestrus. This method was developed and proven for tropical beef breeds as part of Beef CRC research and has become the basis for more accurate description of female reproduction in the Brahman, Santa Gertrudis and Droughtmaster BREEDPLAN evaluations.

Results for Angus and Hereford heifers showed that:

- there is significant genetic variation for age at puberty,
- that the trait is heritable, and
- Therefore could be improved by selection.

Just as importantly for temperate breeds, where reproduction rates are generally considered acceptable, it could provide a means of monitoring the genetics of female reproduction as selection pressure is applied to improve other aspects of productivity (carcass quality, growth and calving traits for example).

Trial EBVs for age at puberty have been distributed to the participating breeders. The range in those EBVs is 74 and 141 days respectively, for the sires of Hereford and Angus heifers evaluated for the project. This means that the female progeny of the lowest (most desirable) age at puberty Hereford and Angus bulls would, on average, become pubertal 37 and 70 days earlier than the heifer calves of the sires with the highest age at puberty trial EBVs.

The results of this study underpin new research (the Southern Multi-Breed Project) which will involve Angus, Hereford, Wagyu, Shorthorn, Charolais and Brahman animals. This is a large MLA funded initiative, one of the focuses of which will be to improve the BREEDPLAN genetic evaluation of female reproduction traits for temperate beef breeds. This new research will be linked to the Repronomics® project in Northern Australia, which is driving the accuracy of genetic (and genomic) evaluation of female reproduction and other economically important traits for northern beef breeders.

The Trial Age at Puberty EBVs are a valuable step in helping breeders to select cattle that balance reproduction, growth and carcass merit, and other traits which contribute to overall profitability.

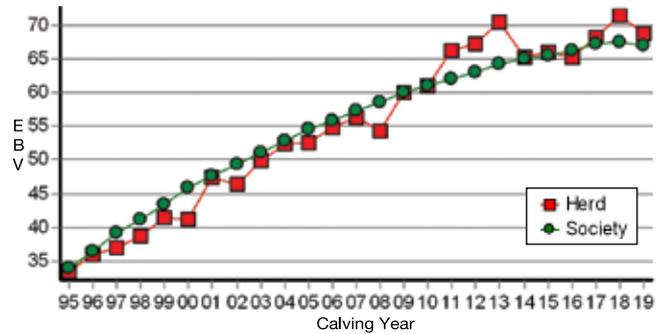

**LOTS 2, 3, 4**

# TEMPERAMENT

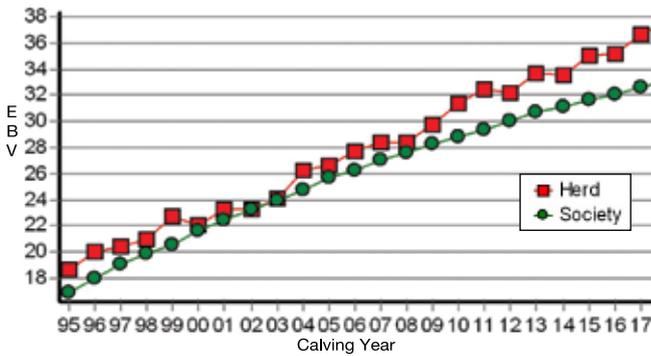

In a recent survey in the US, this was ranked as the most important genetic trait by US beef producers. Yalgoo has long had a reputation for breeding quiet cattle.

Yalgoo is one of the very few whiteface studs that measure temperament. This is done by an independent assessor. The importance of this is paramount. Your cattle will generally react differently around a new face. Your bull provider's cattle are used to him/her, however they won't be there on your farm to deal with the bull on a day to day basis. By getting an independent assessor to do this we are much more likely to pick up any aggressive stock before they leave the farm.

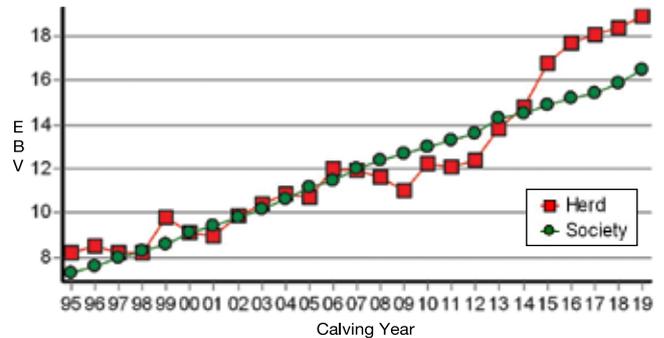

MATURE WEIGHT (kg)

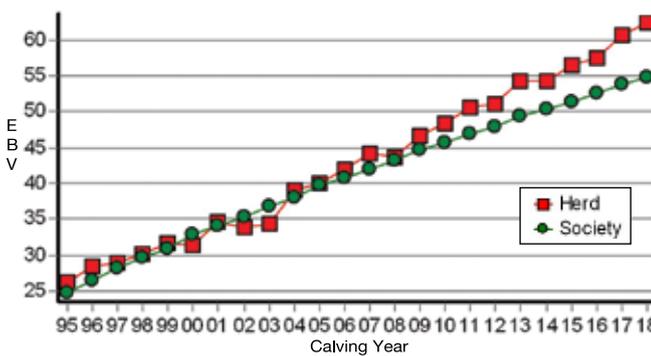

200 DAY GROWTH (kg)

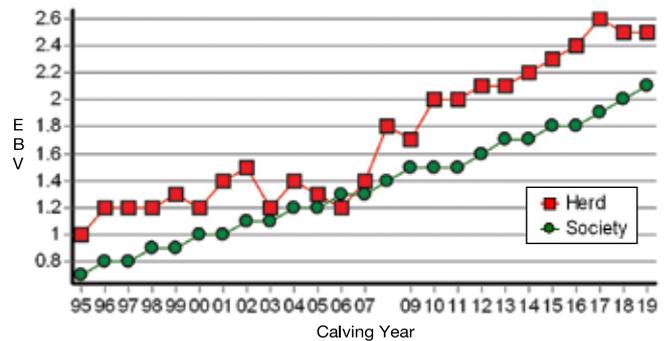

200 DAY MILK (kg)

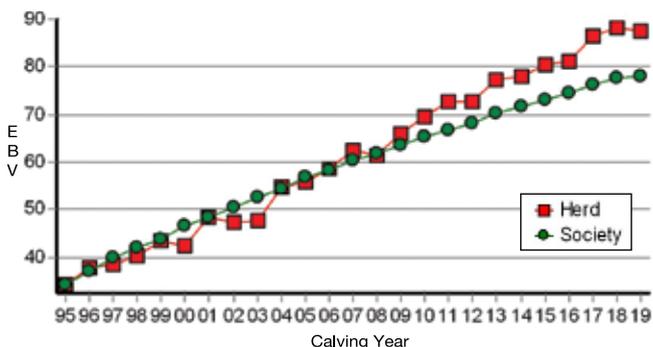

400 DAY WEIGHT (kg)

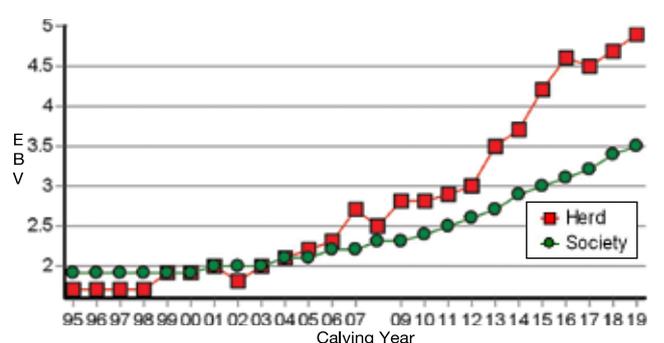

SCROTAL SIZE (cm)

600 DAY WEIGHT (kg)

CARCASE EMA (sq.cm)

**PHENOTYPIC TRAITS**

The phenotypic traits that Yalgoo select for are:

- Superior visual muscling
- Structural correctness
- Correct udder type
- Eye pigment and placement

**MATURITY TYPE**

Maturity type is controlled both by genetic and environmental factors. We aim to produce frame 7 bulls with positive fat cover and a medium/early maturity pattern.

We find under high stocking rates, earlier maturing cattle are more versatile and marketable.

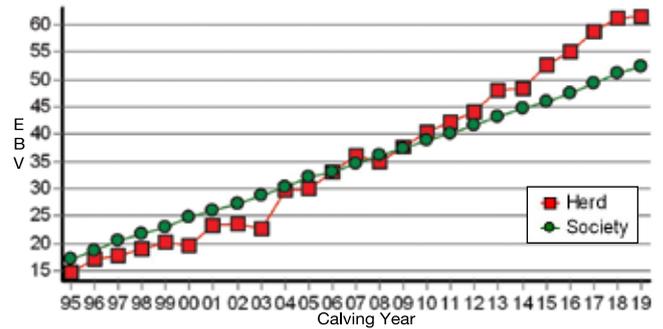

**DATA INTEGRITY**

Yalgoo has a Breedplan completeness of recording rating of four and a half stars.

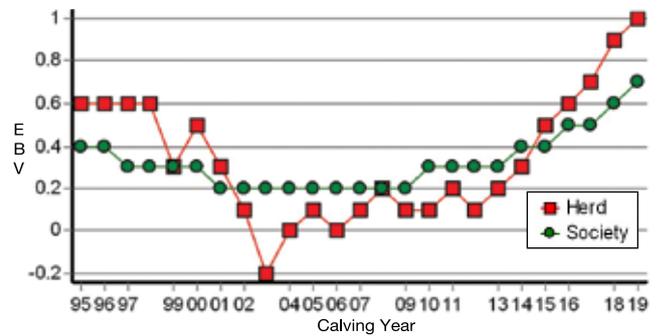

Our herd enjoys a high degree of performance predictability as a result of accurate BREEDPLAN EBV's. This is due to extensive testing in the following traits:

- ALL stud calves are weighed at Birth, increasing the accuracy of their birth weight EBV
- ALL stud bulls and heifers are weighed for 200, 400 and 600 day weight. Steers are weighed and recorded until they are sold. By weighing all animals we are increasing the information nucleus on each dam and creating greater herd linkage which increases BREEDPLAN accuracies
- ALL stud heifers and bulls (since 1972) have been scanned for EMA, fat depth and IMF (since 2000). Therefore our sale bulls have more accurate carcass EBV's and we are maximising the carcass information from our herd, allowing us to achieve more rapid genetic progress in carcass traits
- Mature cow weight is measured
- Independent phenotypic traits are measured including : Structure, Muscle scores & temperament
- Yalgoo was a co operator herd in the across breed NFI trial work to develop an EBV for Net Feed Intake. AGBU is currently making modifications to the NFI analysis
- By sourcing Yalgoo genetics you can be assured that any current/future economically important EBV will be measured with the greatest care and submitted correctly

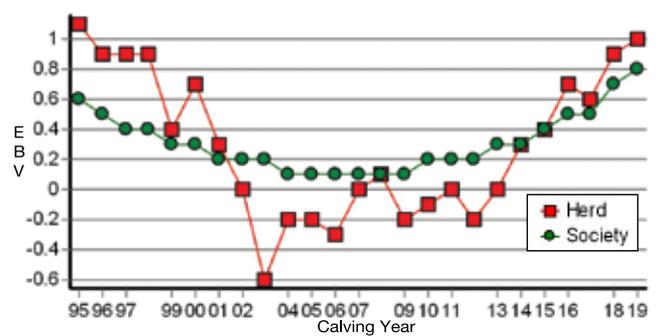

**CARCASS WEIGHT (kg)**

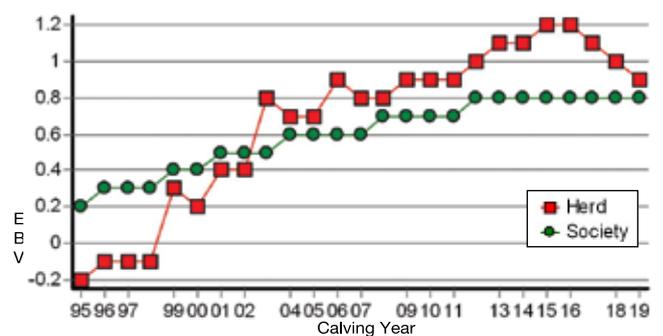

**CARCASS RIB FAT (mm)**

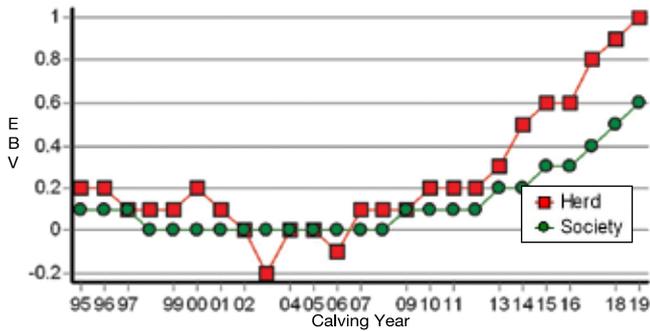

**CARCASS RUMP FAT (mm)**

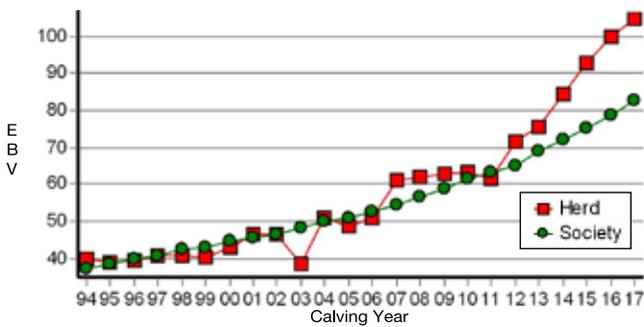

**CARCASS RBY (%)**

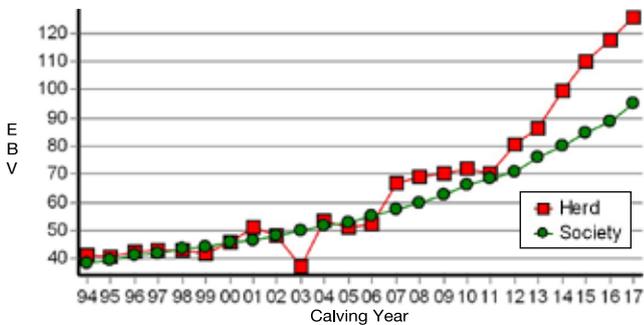

**CARCASE IMF (%)**

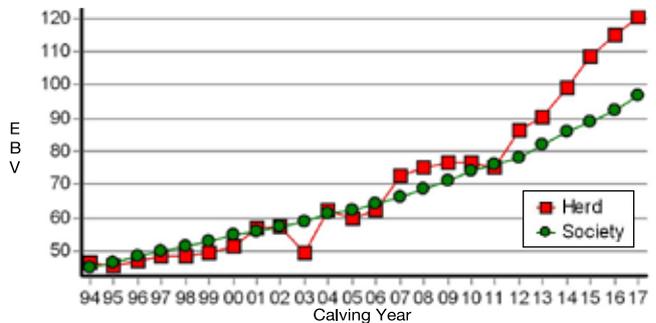

**GRASS FED STEER (\$)**

**GRAIN FED STEER (\$)**

**EU (\$)**

**MANAGING YOUR YALGOO BULL**

Appropriate nutrition and paddock size must be provided when the bull is to be used in a single sire mating situation. All bulls should be examined frequently during the joining period so that signs of injury or disease can be detected and treated immediately.

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

**Yalgoo mixed age cows conceived at 95% in 2019 during the worst drought on record**

# YALGOO QUALITY ASSURANCE

## DATA INTEGRITY

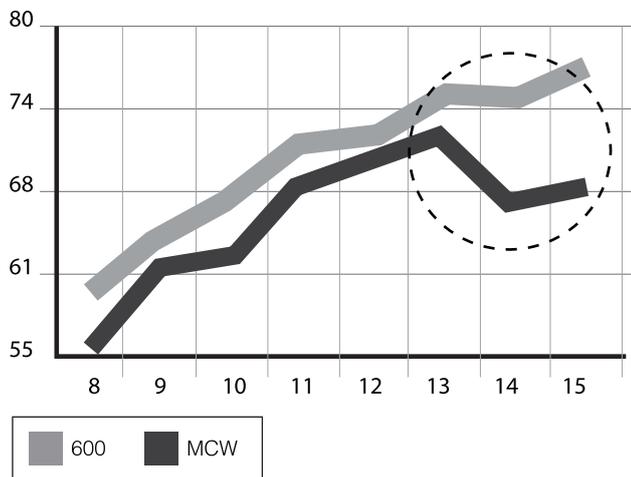

Yalgoo has a Breedplan completeness of recording rating of four and a half stars.

Our herd enjoys a high degree of performance predictability as a result of accurate BREEDPLAN EBV's. This is due to extensive testing in the following traits:

- ALL stud calves are weighed at Birth, increasing the accuracy of their birth weight EBV
- ALL stud bulls and heifers are weighed for 200, 400 and 600 day weight. Steers are weighed and recorded until they are sold. By weighing all animals we are increasing the information nucleus on each dam and creating greater herd linkage which increases BREEDPLAN accuracies

- Mature cow weight is measured
- Independent phenotypic traits are measured including : Structure, Muscle scores & temperament
- Yalgoo was a co operator herd in the across breed NFI trial work to develop an EBV for Net Feed Intake. AGBU is currently making modifications to the NFI analysis
- By sourcing Yalgoo genetics you can be assured that any current/future economically important EBV will be measured with the greatest care and submitted correctly

## MANAGING YOUR YALGOO BULL

Appropriate nutrition and paddock size must be provided when the bull is to be used in a single sire mating situation. All bulls should be examined frequently during the joining period so that signs of injury or disease can be detected and treated immediately.

## MATURE COW WEIGHT

I have made special mention of this graph to highlight the importance of how mature cow weight effects stocking rate.

From 2009 to 2013 (circled area), MCW and 600 were increasing at the same rate. This is what you would expect when no selection pressure is being applied, as these traits are highly correlated.

From 2013 to 2015 we can see a distinctive gap open between these two traits. This gap reflects the selection pressure that has occurred on mature cow weight. The growth curve is being bent at 600 days and this has a pronounced affect on stocking rate. Importantly 600 day wt has not been compromised to achieve this result. This means there is no compromise in terms of income received on young sale stock as long as these stock are marketed before 600 days. However there is the ability to increase stocking rate as the MCW EBV has fallen by 8kgs.

## BEEF CLASS STRUCTURAL ASSESSMENT

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on affect of structural improvement through out all sectors of the beef cattle industry.

### YALGOO STRUCTURAL PROGRAM:

The 2020 Yalgoo Sale Bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft. The Yalgoo sale bulls were assessed by Dr. Phil Holmes on the 18/5/20.

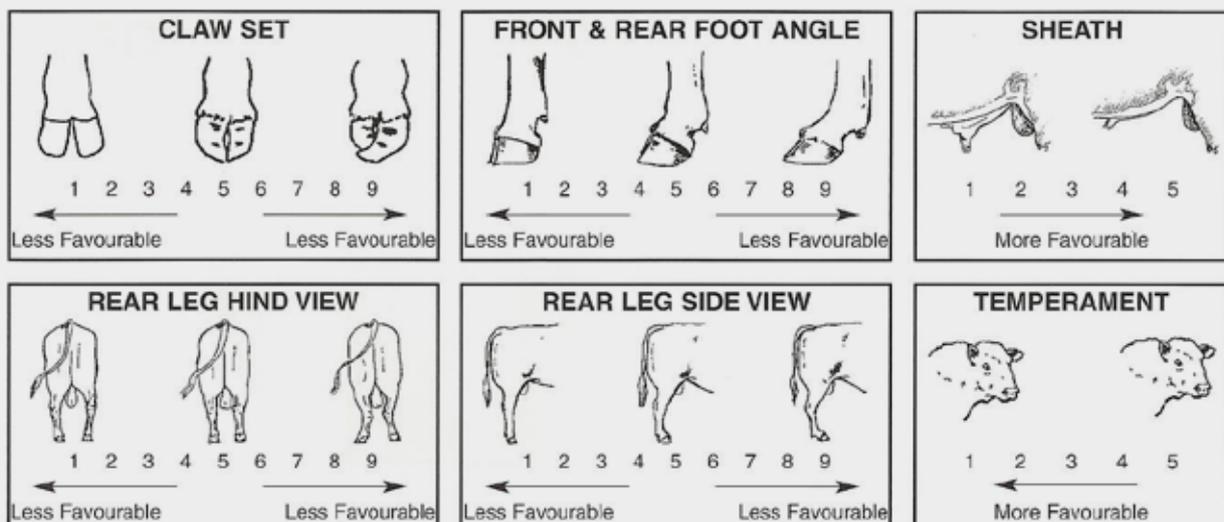

## HOW TO USE THE BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

The Beef Class Structural Assessment System uses a 1-9 scoring system;

- A score of 5 is ideal.
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of 2 or 8 are low scoring animals and should be looked closely before purchasing.
- A score of 1 or 9 should not be catalogued and are considered culls.

### Sheath, Eye and Temperament (1 - 5)

- A higher score indicates a tighter sheath and is more favourable
- A lower score indicates a quieter animal and is more favourable
- A higher score indicates a more favourable eye settin

# TECHNICAL

Only **GROUP BREEDPLAN EBV's with Accuracies (Acc)** can be validly compared between herds.

**Estimated Breeding Values (EBVS)** for the growth traits are calculated in kilograms, The EBV is the best estimate of an animal's genetic merit for that traits.

**Accuracies** are presented with every EBV and give an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBVs more information is analysed for that animal or its relatives.

**Birth Weight** - The lower the birth weight EBV, the lighter is the birth weight potential of the progeny.

**200 Day Weight** - Indicates the relative weight advantage of a sire 8-10 months of age.

**400 Day Weight** - Indicates the relative weight advantage of a sire at yearling age.

**600 Day Weight** - Indicates the relative weight advantage of a sire beyond yearling age. This EBV is important if selecting sires to breed steers for grain fed export markets.

**Genetic Milk** - Reflects the extra calf weight at weaning due to the genetic influence a sire has on his daughters milking and mothering ability.

**Gestation Length** - Lower (-) EBV's indicate easier calving and increased growth after birth.

**EMA** - Bulls with positive EBVs for this trait are expected to produce more muscular progeny than bulls with negative EBVs.

**Fat Depth** - Bulls with negative EBVs for this trait are expected to produce leaner progeny than bulls with positive EBVs.

**Intra-Muscular Fat Percentage** - Estimates the genetic difference in the percentage of intra-muscular fat at the 12th/13th rib site in a 300kg dressed carcass. Positive values are generally more favourable.

**Retail Beef Yield Percentage** - Represents total (boned out) meat yield as a percentage of a 300kg dressed carcass. A more positive EBV indicates higher percentage carcass yield.

**Scrotal Size** - This EBV is an indicator of male fertility in regards to semen quality and quantity. Higher EBVs indicate higher fertility potential of male progeny and is positively correlated to age of puberty in female progeny.

**Days to Calving (DC)** - Measures the time interval from the first exposure to a bull in paddock mating to when a cow calves. A negative EBV indicates a shorter interval and therefore higher fertility.

**Mature Cow Weight** - Is an estimate of the difference in cow weight at calf weaning time and is an indicator of mature cow weight and potential feed requirements.

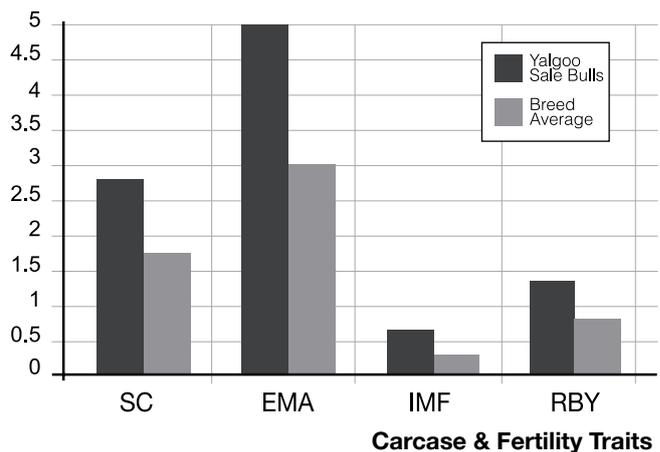

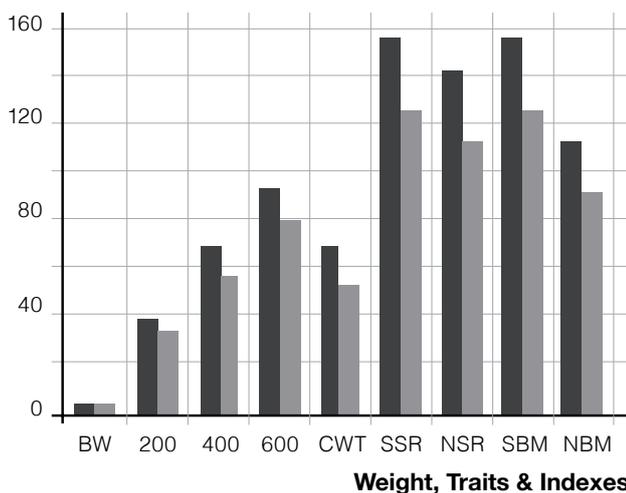

**Carcass Weight** - Estimates the difference in carcass weight at a standard 650 days of age.

**Supermarket Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 50-70 DAYS). Steers are assumed marketed at 450kgs live weight (250kg HSCW and 12mm P8 fat depth) at 17 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

**Grass Fed Steer Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting grass finished steers. Steers are assumed marketed at 600kg live weight (330 HSCW and 8mm P8 fat depth) at 23 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

**Grain Fed Steer Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture grown steers with a 125 day feedlot finishing period for the grain fed markets. Steers are assumed marketed at 600kg live weight (330 HSCW and 20mm P8 fat depth) at 20 months of age. Daughters are retained for breeding. There is a significant premium if steers reach a marbling score of 2 or greater.

**EU Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture finished steers for the EU markets. Steers are assumed marketed at 620kg live weight (330 HSCW and 14mm P8 fat depth) at 24 months of age. Daughters are retained for breeding. There is no marbling requirement.

# NEW SIRES 2019 & 2020

Our search for next generation sire's led us to the following bulls from OZ, NZ and the US. All have superior performance, proven pedigrees, strong phenotypes and breed leading dams.

## **\$20 000 Tobruk Lennox**

- First sons sell
- Widely used, sound, thick moderate Spark son
- High EMA IMF and excellent DC

## **Wirruna Nixon**

- Moderate Powerhouse
- Top 5% Growth Traits EMA IMF and all indexes

**NJW 79Z Z311 Endure 173D \$150 000 High Seller for NJW  
- Large semen share purchased**

**EF Validated – Spread bull with proven performance in Olsen Ranch progeny  
test. The highest IMF breeding value we could find.**

**NJW 135U 10Y 27A Hometown**  
**Proven structural integrity, calving ease, carcass and phenotype bull**

**Koanui Techno – Sons sell**  
**Great carcass quality, structure, performance**

**Lot 1 YALGOO NAUTILUS P173 (AI) (P)**

Notes: Our third drop of Techno's. A bull that has seen enormous popularity. Lot 1 is the second heifer bull we've used in herd from dam J082. She has moderated the extremes from Techno in a sound attractive bull that will cover both cows and heifers. Please note: lot's 1,2 and 3 were used over 100 stud heifers on adjustment in the apex of the drought. Refer to notes in the welcome. Regardless, they represent some of the very best genetics offered at Yalgoo and the shrewd cattlemen may access some herd building genetics at good value. Notes: A bull that excels in the business and pleasure traits. P007 brings all the best of Trust and Wallace together in a faultless phenotype. Excellent angles, soft, thick, mobile and very attractive. He's a bull that will breed muscular, attractive, sound, spread bull's and front paddock females. He is a rare bull that will improve calving ease, increase growth, improve carcass and udders and stamp a stylish, attractive type. P007 is the first calf from one of our best Trust daughters, who has another cracker for next year that we plan to use in herd. Used over stud heifers. Semen to be collected for within herd use. Notes: P025 is one of the most promising young sires around. He has all the attributes to make a positive difference as well as some extra bonuses that make him a valuable breeding tool. His pedigree is a list of some of the most influential carcass bulls of the past 20 years globally. He contains a double cross of Fellis as well as X51 and Remitall Online. It's not a surprise that he has serious visual carcass and an EMA in the top 1% of the breed. Interestingly he is also very dark, soft, well made and attractive. He was born at 35kgs from a first calf heifer. Significantly, P025 was mated at 450kgs over mature stud cows at the peak of the drought in a syndicate. His group achieved 95% conception and the bull has since accelerated away from his peers. A bull that puts phenotype, genotype and proven performance together culminating in top 1% for the self replacing indexes. Semen to be collected

Traits Observed: GL,200WT,400WT,600WT,SS,FAT,EMA,IMF,Genomics

Notes: Very complete, multi use stud sire. Sire Kickstart is out on his own in terms of producing these bulls that are top end for CE, fertility with strong growth, carcass and optimal maturity pattern. There aren't many bull's in the breed that you can multiply each trait by the next in terms of generating income. Mobster P015 is one. He is one of 2 P bull's in the breed that do better than +9 for CE and 107 for 600. P015's performance data is complimented by a very complete phenotype making him a unique sire prospect. Monster EBV's put P015 well inside the top 1% of the breed for all indexes. It would be a challenge to find another sire option with top 1% indexes and P015's phenotype. Top 5% CE DIR 600 CWT Top 10% CEDIR 200 400 CWT Top 25% EMA SC RBY GL. Market/ system suitability: MP MSA F EU HGS BB W

Notes: Very promising stud sire option by the \$110 000 Injemira Anzac K220. He comes with an outcrossed dam that has another cracking Techno calf for next year. Tick's boxes across the page for bull breeding with his ability to move growth and all carcass traits; combine this with a very attractive phenotype, strong muscling and sound structure and you've got a sire prospect. Notes: P054 has the second highest 600 EBV of all males born in 2018. P054 was born at 42kgs and had a more moderate BW EBV before his 200 400 600 data was entered. He has been so far ahead of his peers at 200 400 and 600 that his BW EBV has increased with each weight entered. Very correct bull that is still the right type in terms of fat, muscle and maturity even with his extreme performance. Very strong fertility data completes a compelling picture. Traits Observed: BWT,200WT,400WT,600WT,SS,FAT,EMA,IMF,Genomics

Notes: Break out P112 is very close to the complete package in the sale for me. Extreme thickness, ideal maturity, profitable EBV profile with softness and our best ever cow as a dam. Dam A36 was a legend because she was so repeatable with phenotype and genotype. We flushed her extensively because we knew she was the ideal cow to build a thrifty, fertile herd with lots of carcass around. Highly recommended for stud herd's to correct maturity pattern, improve carcass traits and embed a unique female in A36. Top 10% GL MILK 200 EMA CWT RIB RUMP and IMF. Top 25% 400 600 all INDEXES. Market/ system suitability: SM MSA F BB

Traits Observed: CE,BWT,200WT,400WT,600WT,SS,FAT,EMA,IMF,Genomics

Notes: A stud sire phenotype on lot 29. Probably the most mobile, classy bull in the sale. Legend P180 is a maternal brother to L016, who was used in herd at Yalgoo. This guy is a better bull for structure, quality and mobility. Another bull you could join to both stud cows and heifers. Our best Thunderbird, a bull we shared with Brian Burgess. Nothing extreme in P180, just right across the board for phenotype. A strong maternal pedigree and a phenotypic favourite here. Top 25% CE DRTS MILK RBY. Market/ system suitability: MP SM F W BB

## CHAPTER ONE - PRELIMINARY

1. (a) A vendor is bound by these terms and conditions by offering livestock for sale by auction.  
(b) An agent (which includes an auctioneer) is bound by these terms and conditions by conducting an auction sale.  
(c) A buyer is bound by these terms and conditions by bidding at auction.
2. In these terms the expression auctioneer, agent, buyer and vendor respectively includes the servants, contractors, agents of each of them. The auctioneer, agent, buyer and vendor shall be wholly responsible for the acts and omissions of their respective servants, contractors and agents. The term 'auctioneer' includes, so far as the law and context permits, the vendor's agent.  
(b) When used in these terms the expressions 'companion animals' means all animals originating from a property on a particular day.  
Where lots are split and sent to multiple establishments, then all of these animals shall be regarded as companions.
3. The following applies in interpreting these terms and conditions:  
(a) The following words have the following meanings:  
Fees means all levies, charges, fees, costs and other expenses incurred or relating to these terms and conditions and the sale and purchase of livestock including, without limitation, transaction levies, yard and weigh dues, cartage, advertising and rebates, and whether paid for, or incurred, by the agent; Livestock means animals auctioned pursuant to these terms and conditions; and Price means the amount at which the lot has been sold to the buyer referred to in clause 7 of these terms and conditions  
(i) plus any Fees and other expenses incurred in relation to the purchase of livestock that are payable by the buyer; and  
(ii) plus any GST added in accordance with clause 12.  
(b) These terms and conditions are subject to legislation or regulation in the State in which the auction is conducted and in the event of any conflict then the legislation or regulation will prevail. The provisions of these terms and conditions are in addition to, and do not derogate from, the duties and rights of vendors, agents and buyers set out in legislation and regulation in the State in which the auction is conducted.

## CHAPTER TWO - STANDARD TERMS OF SALE

4. Subject to any reserve price, and to the right, prior to the fall of the hammer, of the vendor to withdraw any lot without declaring the reserve, the highest bidder shall be the buyer.
5. The auctioneer has the right to bid on behalf of the vendor provided that right is notified prior to the commencement of the sale and is subject to State law.
6. A bid cannot be made or accepted after the fall of the hammer unless, in accordance with clause 8, the auctioneer decides to put the lot up again.
7. The last price called by the auctioneer at the fall of the hammer shall be the amount at which the lot has been sold.
8. In the event of a disputed bid, the auctioneer is the sole arbitrator of the successful bidder or the auctioneer may decide to put the lot up again. The auctioneer's decision is final.
9. The auctioneer may refuse to accept any bid which, in the auctioneer's opinion, is not in the best interests of the vendor and need not give reasons for doing so. The minimum bid for liveweight selling is 0.2 of a cent (\$0.002).
10. A bidder shall be deemed to be a principal unless, prior to bidding, the bidder has given to the auctioneer a copy of written authority to bid for or on behalf of another person.
11. The successful bidder at a livestock auction sale must give to the auctioneer at the fall of the hammer:  
(a) the purchaser's name; or  
(b) the bid card number which identifies the purchaser; or  
(c) the name of the person on whose behalf the successful bid was made; and (d) the Property Identification Code (known as the 'PIC') of destination.
12. The auction shall be conducted on the basis that the bid price shall be exclusive of Goods and Services Tax (GST). GST shall be added after the fall of the hammer for those sales subject to GST.
13. As soon as practicable after the fall of the hammer, the buyer shall if requested by the agent, sign the agreement for sale.
14. If a buyer does not comply with any of these terms and conditions, which includes the requirements of State law, any livestock knocked down to that buyer may be re-sold by public auction or private contract in whatever lots and manner the auctioneer decides. The re-sale may be with or without notice and shall be at the buyer's risk. The buyer is responsible for all loss and expense arising out of a re-sale and is not entitled to any resulting profit.
15. The buyer of livestock must pay the agent the full amount of the purchase price in immediate funds on receipt of a tax invoice. Payment is required prior to delivery unless some other time for payment is specified in a written agreement between the buyer and the auctioneer that was made before the fall of the hammer.
16. No person may bid unless, prior to the commencement of the sale, that person has made arrangements satisfactory to the auctioneer for payment for livestock purchased. If bids in breach of this condition are inadvertently accepted, delivery shall not be given until the purchase money is paid and any law, rule or practice to the contrary is accordingly negated as far as possible.
17. (a) Cattle sold on a liveweight basis that are weighed pre-sale are at the risk and expense of the buyer upon the fall of the hammer.  
(b) Cattle sold on a liveweight basis that are weighed post-sale are at the risk and expense of the buyer immediately after weighing.  
(c) All livestock other than cattle sold on a liveweight basis are at the risk and expense of the buyer upon the fall of the hammer.
18. (a) Subject to this clause the sale is complete on the fall of the hammer.  
(b) The time for rejection is the time commencing at the fall of the hammer and ending at the first of:  
(i) delivery is taken by a representative of the buyer;  
(ii) departure of the animal from the purchaser's delivery pen; or  
(iii) one hour after the last animal is:  
a. in the case of pre-sale weighing, sold; or  
b. in the case of post-sale weighing, weighed.  
(c) During the time for rejection the buyer may reject any animal which is lame, blind or diseased where that condition existed prior to the fall of the hammer but could not be reasonably observed when the animal was in the selling pen.  
(d) If the purchaser rejects an animal during the time for rejection then the sale of that animal is cancelled and the animal is returned to the vendor or sold at such price as the purchaser and the agent may agree.  
(e) This sub-clause applies only to cattle which are sold in Queensland at auction for slaughter. The agent has responsibility for the prevention of loss or escape (but not death, sickness or injury) of those cattle from the time of the fall of the hammer, through delivery to and from the scales, to the buyer's delivery pen and on to the buyer's nominated transport. This responsibility ends at the earlier of those cattle boarding the buyer's nominated transport or sunset on the day after the sale. This sub-clause does not apply if the agent makes an announcement to that effect prior to sale.
19. (a) Subject to the right of rejection in Clause 18, all conditions and warranties expressed or implied by law are hereby excluded from the sale to the extent that the law allows. All lots are open for inspection prior to the commencement of the sale and are sold with all faults, if any. No compensation shall be given for any faults, imperfections, errors of description, number in or of any lots sold or otherwise.  
(b) Any claim or objection arising out of an error or misdescription in the provision of relevant information in terms of legislation or regulation concerning the National Livestock

Identification Scheme (NLIS) must be made by 5:00pm on the seventh day after the fall of the hammer. No objection, requisition or claim against the vendor or agent in respect of such error or misdescription can be made after that time.

- (c) Any statements made by the vendor or the auctioneer whether in writing or orally to the effect that any female has been pregnancy tested or scanned positive shall mean and require only that a certificate in writing shall be supplied to the buyer signed by a qualified veterinary surgeon or certified scanner certifying that the said female has been tested or scanned on the date specified in the certificate and that in the opinion of the surgeon or scanner the female was pregnant on that date.  
(d) For cattle, the agent undertakes to make every reasonable effort to ensure that any NLIS cattle device number is transferred from the saleyard account to the purchasers account on the NLIS database no later than midnight on the day of the sale.  
(e) Where livestock have a food safety or market eligibility status derived from the NVD and/or the NLIS/ERP database, the agent will inform the buyers by presale catalogue in conjunction with vendor branding and/or announce the status prior to the offering of those lots.
20. If delivery is made to, or possession obtained by, the buyer or its representative before full payment of the Price, then until full payment is received, the buyer:  
(a) does not acquire title to the livestock;  
(b) holds the livestock as bailee only for the vendor;  
(c) must act in a fiduciary capacity in its relationship with the vendor;  
(d) must store the stock separately or so that they are readily distinguishable from other livestock owned by the buyer;  
(e) is responsible for the safety and well being of the livestock;  
(f) may make a bona fide sale for market value of any or all of the livestock. As between the buyer and the subsequent buyer, the sale shall be made by the buyer in its own name and not as agent for the vendor, however as between the vendor and buyer, the sale shall be made as bailee and agent for the vendor; and  
(g) must keep and account for the proceeds of any subsequent sale separately from its other money and hold those proceeds, together with the benefits of any rights against subsequent buyers, on trust for the vendor.
21. In addition to clause 20, if payment is not made according to clause 15, but delivery has been made to, or possession obtained by, the buyer or its representative:  
(a) The vendor or its agent may repossess and resell the livestock and enter property owned or occupied by the buyer or its representative if necessary to do so; and  
(b) Interest may be charged at the rate usually charged by the agent for overdue accounts on any amounts which remain owing at any time.
22. The buyer may not make any claim against the vendor for actions by the vendor or its agent under clauses 20 or 21 and indemnifies the vendor and its agent against any loss, damage, costs, expenses, penalties, fines or claims suffered by the vendor, the agent or any person or entity arising from the vendor exercising its rights under clauses 20 or 21.
- 23.1. Clause 23 applies whenever the agent pays the vendor before being paid by the buyer, which the agent is not bound to do. The agent is then the del credere agent of the vendor at law.  
23.2. The vendor hereby gives notice to the buyer of the assignments referred to in clause 23.3.  
23.3. When this clause applies, in addition to any rights of the agent that arise by operation of the law, the parties agree that, subject to clause 23.6 the agent is subrogated to all rights of the vendor under these terms and conditions against the buyer.
- 23.4. Title to the livestock does not pass to the agent or a nominee of the agent unless the agent, by written notice to the vendor, notifies the vendor that it is to be transferred to the agent or a nominee of the agent.
- 23.5. The vendor acknowledges that the agent may take enforcement, repossession or other action to recover any livestock for which the buyer has not paid in full, or the Price of such livestock, owing by the buyer under these terms and conditions:  
(a) when this clause does not apply, as agent of the vendor (including by reselling the livestock); and  
(b) when this clause applies, on the agent's own behalf exercising the rights of the vendor by subrogation or assignment under these terms and conditions (whether in the vendor's name or not) and, where title to the livestock has not passed to the agent, by selling the livestock as agent of the vendor without the agent having to account to the vendor for the proceeds of sale.
- 23.6. The agent may at any time, assign, transfer, securitise or otherwise dispose of all or any of its rights under these terms and conditions and any debts created pursuant to it (including, without limitation, the rights assigned to it under clause 23.3).
- 23.7. The vendor hereby irrevocably appoints the agent as the vendor's attorney to:  
(a) do at any time and in any manner as the agent thinks fit all acts necessary or desirable to perfect or improve the rights and interests afforded, or intended to be afforded, to the agent under these terms and conditions; and  
(b) appoint one or more sub-attorneys to do anything that the agent may do as the vendor's attorney.
- 23.8. These terms and conditions do not render the agent liable to the buyer as vendor nor entitle the buyer to set off against the agent any right the buyer may have against the vendor or otherwise.
- 23.9. The buyer acknowledges that the provisions of this clause 23 are intended solely for the benefit of the agent (and its assigns) and the vendor. The liabilities and obligations of the buyer will not be in any way affected:  
(a) by this clause 23, other than as it expressly provides; or (b) by the failure of the agent or the vendor or either of them to comply with the terms of this clause 23.
- 23.10. The buyer must pay all amounts payable to the vendor or the agent under these terms and conditions without any deduction, withholding, set off or counterclaim whatsoever, whether the benefit of a deduction, withholding, set off or counterclaim is alleged to exist in favour of the buyer as against the vendor or the agent in any capacity whatsoever or any other person including any assignor of the vendors or the buyers interests under these terms and conditions.
24. (a) The agent agrees that he is liable to pay to the vendor the Price, less such commission as is agreed between the vendor and the agent, and in the absence of any agreement such amount as is reasonable, and less the Fees that are payable by the vendor that were incurred by the agent on behalf of the vendor in relation to the sale of the livestock.  
(b) In the event that the buyer pays the Price or part of it direct to the vendor then the agent has no liability to the vendor for the amount of such payment. Further, if the agent pays the vendor any amount which the buyer also pays direct to the vendor in respect of the same livestock, then the vendor must repay the agent that amount and the agent may debit that amount to an account held in the name of the vendor by the agent.  
(c) Regardless of whether or not a sale has occurred the agent may, but is not under obligation so to do, instead of deducting payments owed to it by the vendor, debit the amount of the commission and fees to an account held in the name of the vendor by the agent.
25. The auctioneer has been retained by the vendor as auctioneer for the purpose of selling the livestock comprised in the lots. The terms of engagement between the auctioneer and the vendor do not extend to the provision of advice by the auctioneer to the vendor in relation to the safety or otherwise of the sale ring, the saleyards and the surrounding environments.

## CHAPTER THREE - VENDOR WARRANTY FOR CORRECT PRESENTATION AND DECLARATION

26. This chapter applies only in the case of livestock and their companion animals sold at auction for slaughter when the buyer is the slaughterer and the livestock are transported direct from the saleyard to the meatworks at which they are slaughtered. This chapter does not apply if the buyer is a trader who subsequently resells the livestock to a slaughterer. A slaughterer is any person who pays the AMPC Processor Levy.
