65TH BULL SALE

Monday 10th August 2026

46 Profit Driving Bulls

ALL SALE BULLS SEMEN TESTED

Videos of all lots available 2 weeks prior to sale date
yalgoogenetics.com.au

Monday 10th August 2026

Commencing 1:30pm

Lunch and smoko available at the sale

JBAS Status - Yalgoo has level 7 JBAS accreditation

Sale Details: A rebate of 2% will be paid to outside agent introducing approved buyers in writing, 24 hours prior to commencement of the sale, accompanying them and settling within seven days of the sale.

This sale is interfaced with AuctionsPlus and will be conducted live online in real time. Bidding is available only to registered AuctionsPlus users. To bid you must register, preferable 24hrs before the sale. Contact AuctionsPlus on 02 9262 4222 for more information

Performance Recorded Sale

Your Carcase Choice!

THANKYOU for taking time to consider the Yalgoo program. After 77 years of breeding and 64 sales; today more than ever we take our responsibility of adding genetics to your herd seriously. We strive to offer a total program; from strict herd management to superior genetics and a market demanding phenotype. All boxes are ticked, no short cuts are taken – we call this process **Best Practise Genetic Improvement**.

We provide:

- ✓ Sound, functional bulls carrying superior genes
- ✓ Industry best quality assurance including:
 1. Independent structure and fertility testing on sale bulls
 2. Serving ability tested bulls
 3. Genotyped and parent verified bulls
 4. Bluestar pre-sale vaccination program
 5. Semen tested bulls
 6. High data integrity (**5 star Breedplan rating**)
 7. Yalgoo is a Bush Agribusiness - Top Stud
 8. Commercially, acceptable phenotype
 9. Unique bull depreciation model to control bull costs
 10. Industry best practise herd management – focusing on producing a low cost beef herd

For those of you in the south I hope recent rain has put some wind in your sails, so you can capitalise on a red hot beef market. For those of us in the north, some rain and unseasonably warm weather has stemmed the bleeding. Tough times produce resilient, profitable cattle and no doubt your herds will be well positioned to deliver new levels of productivity in the spring.

16 years ago we made a conscious decision to drive body composition in our cow herd. There were obvious benefits on the hook, but we were convinced the cattle with bigger energy reserves (Visual muscle, EMA, FAT and IMF) would reproduce more consistently under environmental stress. A move that is clearly defined in our genetic trends from – a larger, leaner beef cow to a moderate, muscular, heavy and gutsy cow. The cow herd has got to a stage where high fertility rates are embedded and constant over variable season's in our Hereford herd. In the paddock; both the cows and the bulls look very uniform in regards to maturity pattern and muscle and fat distribution. This push has clearly been validated in our paddock through a very low cost cow base. However, recent industry work has also established the clear advantage of body composition from a fertility point of view and thus the recent introduction of body composition EBV's in other breeds.

What does all this mean?

The economic efficiency (low cost to high gain) of how you utilise your pasture base into kgs of beef dictates your beef herds financial performance. Hereford cattle are the “lowest cost” southern beef breed we have. They are the industry's best combination of high fertility and high conversion rates. This equates to a low cost per kg of beef and high production (kg/s DSE). The two most profit sensitive KPI's in your beef herd.

‘Simply put; we are filling the petrol tank up to the limit to allow our clients to get the most from their cattle through their management.’

As we look to a future of market opportunities and compliance pressures; an animal that grows quickly, is highly fertile and delivers a premium product with the lowest amounts of natural resources will be paramount. Moderate, easy fleshing Hereford infused cattle carrying high gaining genetics are this article.

The bull's also average in the TOP 13% for the breed for the Sustainability index. This makes the Yalgoo sale one of the highest indexing sales in the country. Comparatively we are 5 generations ahead of the industry average for potential genetic profit.

It's imperative when you are considering bulls that you put their potential economic impact at the top of your bull selection criteria. Our job is to balance this with the type you like to look at and the cost of these genetics to your business.

Regarding costs; Bull costs can be a major contributor to cost of production. The cost of genetics has been extreme in the past few years. Bull cost's per calf of \$200+ per calf are becoming more common. These costs are a major handbrake on profitability and I encourage you to consider your calf costs. The investment risk of genetics is such that-

- The payback period is long and generally covers high and low beef cycles.

The only way to control this risk is for the bulls to last longer. This amortises your financial investment by producing more calves per bull and lowering the cost per calf born. Our Bull Breeding Soundness Evaluation (BBSE) data suggests our bulls are lasting close to 5 matings. Our BBSE is designed to give you the confidence to mate at 2%. Allowing you to spread your bull investment across more cows.

In regards to Genomics; improved accuracy of EBV's allows our clients to purchase bull's with the confidence that high performance genetics will deliver real world profitability.

In the bull notes, we have included recommendations on which market/ system that individual lots would be best suited to. The heifer (H) and multi-purpose (MP) bulls, we believe are safe to use over heifers.

This year's bulls are a culmination of piecing together balanced performance and putting the cattle under significant paddock pressure for over 7 decades. A 'no passengers policy' ensures herd productivity is consistently high. This group of bulls are certainly our best effort at combining high carcase merit and good design. I really encourage you to inspect them in the flesh.

You will notice a distribution of new and proven sires represented, with the commonality of carcase enhancement shared by all these sires. SHF Houston and Limehills Stardom are new and exciting. Ke Warra Maxwell is gaining momentum both here and in NZ for his structure, phenotype and balanced performance. Wirruna Real Deal and Injemira Redford are proven profit drivers with an exceptional balance of both genotype and phenotype.

Finally, we would like to congratulate Ian and Diana Locke on their significant contribution to the beef industry. Wirruna became one of the benchmark programs across all breeds for discipline and a Lazor like focus on profitability. We wish you both well for your final sales and trust that you will enjoy your extra time post dispersal.

Thank you to our 'super staff'. Brett's quiet management, Issy's hard work and passion for the stud, Annabelle's diligence and Sarah's consistent excellence. Your hard work and ability to roll with the sometimes mad and complex operation that is Yalgoo... it's greatly appreciated.

We would like to thank everyone who has supported our program. We look forward to seeing you at our 65th sale. If you require more information please get in contact with me.

Cheers, Jock

All lot's will be videoed and Video's will be available two weeks before the sale on the HAL, Auctionsplus and Yalgoo websites.

Does a higher beef price equate to a proportionally higher return for all beef producers?

I ask you to consider these following simple sums:

Assumptions:

2013 feeder steer price: \$2.00/kg

Angus Premium: 10 cents

Heterosis: 10%

2013	Angus	Black Baldy
Steer Weight (kg)	500	550 (10% Heterosis)
Price (\$/kg)	\$2.00	\$2.00
Premium (cents)	10	0
Gross (\$)	\$1050/hd	\$1100/hd
Income/100hd	\$105 000	\$110 000
Income difference/100hd	-\$5000	+\$5000
Income differential (%)	-2.4%	+2.4%

If we consider the initial question, then the answer is no. The black baldy producer is getting rewarded more than 2% extra over the pure bred producer in a high beef cycle. When the beef price is very low, a little bit of a premium can be helpful. However, when the price is historically high then production becomes increasingly important.

This is because regardless of what the market is doing; the fundamental profit drivers of beef production don't change. Fertility and weight in conjunction with stocking rate, drive profit faster than anything else.

Depending on how many maternal benefits you include in your heterosis, you gain a minimum of 10% in a two way breed split. This is fixed.

Assumptions:

2016 feeder steer price: \$3.50/kg

Angus Premium: 10 cents

Heterosis: 10%

2016	Angus	Black Baldy
Steer Weight (kg)	500	550 (10% Heterosis)
Price (\$/kg)	\$3.60/kg	\$3.50/kg
Premium (cents)	10 cents	0
Gross (\$)	\$1800/hd	\$1925/hd
Income/100hd	\$180 000	\$192 500
Income difference/100hd	-\$12 500	+\$12 500
Income differential (%)	-4.8%	+4.8%

There has never been a more important time to be cross breeding.

Where as we can see in the example above; the price premium is not fixed and actually diminishes as the beef price goes up.

In conclusion when the feeder steer price is \$2.00/kg live weight, the pure bred producer needs a price premium of 20 cents/kg to break even with the black baldy producer.

When the feeder steer price is \$3.50 /kg live weight, the pure bred producer needs a price premium of 35cents/kg to break even with the black baldy producer.

GET MORE !BANG! FOR YOUR BLACK

Heterosis: You are getting taxed if you don't utilise it

What is it and what does it do?

- Heterosis, hybrid vigor, or outbreeding enhancement, is the improved or increased function of any biological quality in a hybrid offspring. Achieved through the mixed genetic composition of parental genetic makeup
- Heterosis accelerates lowly heritable traits, that are not easily/quickly achieved in purebreds
- The following results are based on US research studies using genetically breed average Hereford bulls over Angus cows Vs genetically breed average Angus bulls over Angus cows

Why we need it?

1. F1 cow is 8% more efficient than pure bred cow (transforming grass milk) (USMARC)
2. F1 cow lives 38% longer than pure bred (USMARC)
3. F1 cow has 25% more production in kilograms of calf weaned (USMARC)
4. F1 female reaches puberty before a pure bred (MSU study)

Cost and Income Benefits

- Result: F1 female lives longer & is more fertile therefore there is a decrease in replacement costs
- Result: F1 female has an advantage in pregnancy rates of 7% (H R Heterosis Project)
- Result: F1 female more likely to get in calf as a two year & will produce more calves in her lifespan than a pure bred
- These attributes result in a 10% cost saving on cow production costs over a pure bred herd (US MARC)

Health Benefits of Heterosis

- Genetics control immune response and immunity
- Pure bred doubles up more of the undesirable immune-response genes (in breeding)
- Crossbreeding ensures more genetic diversity and optimal immune response
- Thus, a crossbred cow tends to have more optimum immune system function than a straight bred cow
- Results in a healthier mum producing better colostrums which results in a healthier and heavier calf (decrease in infant immune diseases and subclinical losses)

Real World Proof: Recent Studies

- Profitability studies undertaken on the merits of cross breeding in the leading purebred black herds of Simplot Livestock Co., Lacey Land and Livestock,. Harris Ranch and Circle A Angus in the US
- All studies showed a marked increase in income of the Hereford sired progeny over the pure black progeny
- Harris Ranch findings: Through the first year of the multiyear study, the crossbred calves had a \$78/head advantage, compared to their straight bred peers (Table 1). There was a slight advantage to the crossbred (\$10.80/head) for increased weaning weight, but most of it came through feedlot and carcass performance.
- The Hereford-sired group had a definite advantage in average daily gain, dry-matter feed conversion and, ultimately, cost of gain compared to the Angus-sired group.

Traits	Angus Sired	Hereford Sired
Ranch		\$10.80
Back ground		\$14.10
Pre Feedlot		\$24.90
Feedlot		\$86.10
Carcase	\$33.27	
FeedlotandCarcase		\$52.83
NetValueDifference		\$77.73

Study conducted by Dave Daley and Sean Earley, California State University-Chico; co-operators are Lacey Livestock, CA; American Hereford Association; Harris Feeding Co.; Harris Ranch Beef Co.

If you need assistance in implementing a black baldy cross breeding program please contact Yalgoo or Herefords Australia.

If you are not crossbreeding, you are leaving 20-25% of production on the table. Does your pure bred premium cover this?

AIM

To assist you in selecting bulls; for your specific production system or target market.

RATIONALE

Although indexes are an important indication to the suitability for a specific market there are other factors that will determine whether that bull's progeny will be best fit for a specific market.

We have combined the genotype and phenotype to form our recommendation.

METHODOLOGY

Recommendations are our subjective opinion of the suitability of a certain bull for a specific market/production system.

We have used a combination of maturity type, Indexes, EBV's, visual muscle content, feedback from clientele/processors and raw data to form our recommendations.

DESCRIPTIONS

SM = Supermarket Trade

To form our SM recommendations we have primarily used processor feedback.

For a bull deemed to be suitable for the SM trade he has to have a favourable combination of visual muscle, maturity type and SM index.

MSA = MSA Compliance driven markets

To form our MSA recommendations we have primarily used the June SBTS Tech talk document: "Meat Standards Australia Breeding: for Improved MSA Compliance & Increased MSA Index Values"

A bull recommended for MSA compliance markets must have a favorable combination of the following traits:

- temperament
- fat EBV's
- 200 400 600
- IMF
- carcase weight
- visual muscle

F = Feeder Animal

To form our recommendations we have primarily used feedlot feedback/acceptability of Yalgoo and Yalgoo client's cattle. As well as conducting our own market research.

A bull recommended for use in a system producing feeder steers will have a favorable combination of maturity pattern and the GN index.

EU = EU Market

To form our recommendations we have primarily used feedlot/processor feedback/acceptability of Yalgoo and Yalgoo client's cattle. As well as conducting our own market research.

A bull recommended for use in a system producing animals for the EU market will have a favorable combination of maturity pattern and the EU index.

HGS = Heavy Grass Finished Market

To form our recommendations we have primarily used processor feedback/acceptability of Yalgoo and Yalgoo client's cattle. As well as conducting our own market research.

A bull recommended for use in a system producing animals for the HGS market will have a favorable combination of visual muscle, maturity pattern and the GS index.

BB = Black baldy

To form our BB recommendations we have primarily used client/consultant feedback.

Use the Grain Fed Index to select for bulls suitable for a BB herd.

As well as the GN index; for a bull deemed to be suitable for a BB production system he must have a specific balance of traits. This is not to suggest that other bulls won't fit into a BB herd. However, following consultation with existing BB producers it was determined that this balance will be the most profitable in a system using stocking rate as its primary profit driver and producing a 480-520kg black baldy feeder steer in temperate Australia.

W = Weaner Producer

To form our recommendations we have primarily used market research. A bull recommended for use in a system producing animals for the W market will have a favorable combination of maturity pattern and 200 day growth.

HB = Heifer Bull

To form our heifer bull recommendations we have primarily used the genotypic calving ease traits of CEDIR, BW, GL as well as the phenotype and pedigree of the bull

MP = Multi Purpose Bull

These bulls are suitable for cows and heifers. To form our recommendations the bulls need to have a favourable combination of genotypic calving ease and growth traits

YALGOO BULL QUALITY ASSURANCE

Bull costs and their impact on profit.

The primary role of a bull is to get live calves at a reasonable cost. The cost of a calf sired is a direct result of the longevity of the bull and the price paid for the bull.

1. **Structural integrity**
2. **Libido**
3. **Pre sale and post sale management**
(incl nutrition & disease management)
4. **Genetic merit of a bull**
5. **Temperament**
6. **Resilience**

BACKGROUND INFORMATION

Bull failure through breakdown or infertility is a major industry issue. Independent studies have suggested it could be around the 30% - 40% per annum across the industry. Problems often arise between the bull supplier and client as to compensation for a bull failure which is quickly compounded by empty cows. At Yalgoo we are determined to offer industry best practise regarding BULL QA.

Even more of a financial threat is purchasing a bull that is never going to get cows pregnant. Bull Quality assurance was revolutionised in the late 1970's and 80's through work done by Dr. Mike Blockey. After testing thousands of commercial bull's of all ages he showed that 25% of bull's tested were unfit for service. He then developed a protocol to ensure these bull's would be identified before they were sold. This was known as the Serving Ability Test (SAT). Industry uptake was good through the 90's, however it seems there is an industry trend away from bull testing again. Disturbingly this means that around 1 in 4 bulls will again be entering the Australian beef herd unfit for service.

New Zealand research by Greg Tattersfield suggested 28% of commercial working bull's are unfit for service. And the Holmes and Sackett research suggested 18% of young bull's are unfit for service. If you are purchasing un tested bulls, how would you know? Serving Ability Testing, although laborious is the definitive test we have to ensure bull's are going to be able to fulfil their primary role.

The other advantage of Serving Ability Testing is to give the bull sexual experience. With sexual experience under his belt, he is more likely to get more cows pregnant in the first cycle. This increases the pressure put on herd fertility as well as having management benefits. Most importantly it means more weight in progeny at sale time which means more income.

At Yalgoo we offer a pre-sale protocol that is industry best standard.

Our program is as follows:

- **ALL YALGOO SALE BULL'S HAVE BEEN SEMEN TESTED**
- **INDEPENDENT STRUCTURAL ASSESSMENT.**
Independent Structural Assessment. Bulls were independently assessed by Roger Evans - BSS on the 29/5/26
- **NO HOOF TRIMMING.** There has been no hoof trimming on Yalgoo for 20+years
- **VET CHECKED.** All sale bulls are vet checked by Walcha Veterinary Clinic. Yalgoo Sale criteria states that all bulls must measure 32cm or larger for testicle circumference at 400 days. Hocks, feet, penis and jaw structure are also examined.
- All sale bull semen tested by Bovine Breeders.
- **PFIZER BLUE STAR.** All sale bull's are tested to ensure no Persistently Infected animals with Pestivirus are sold. All bull's are vaccinated according to Blue Star protocol
- **FEEDBACK:** To further improve our bull QA we need your help! With the bull you have purchased you will receive an audit of performance. We encourage you to fill out this when/if a problem arises with your bull, and get it back to us. We will use this information to improve our bull QA to ensure our bulls last longer. Everyone in the bull supply chain will benefit from these records.
- **WARRANTY:** Bulls are depreciated over their working lifetime. This results in a stable calf cost for the purchaser. Please speak to Jock regarding the functionality of this warranty.
- **CLIENT GUIDANCE FOR BULL QA:** Please speak to us if you require any assistance in developing your own protocol to ensure your bull's are fit for service each year pre-joining. As your bull ages the likelihood for him being unfit for service increases. i.e. A 6 year old bull is 4 times more likely to be unsound for breeding than a three year old bull.

AGE OF PUBERTY TRIAL/ EBV

Yalgoo has partnered with nine other seedstock herds, Herefords Australia, Angus Australia and with scientists at ACBU, in an MLA funded research project examining the genetics of age at puberty in temperate beef breed heifers.

Age at puberty was assessed in 3,000 Angus and 1,000 Hereford heifers by regular ultrasound scanning, from weaning to synchronisation for AI, to detect first oestrus. This method was developed and proven for tropical beef breeds as part of Beef CRC research and has become the basis for more accurate description of female reproduction in the Brahman, Santa Gertrudis and Droughtmaster BREEDPLAN evaluations.

Results for Angus and Hereford heifers showed that:

- there is significant genetic variation for age at puberty,
- that the trait is heritable, and
- Therefore could be improved by selection.

Just as importantly for temperate breeds, where reproduction rates are generally considered acceptable, it could provide a means of monitoring the genetics of female reproduction as selection pressure is applied to improve other aspects of productivity (carcass quality, growth and calving traits for example).

Trial EBVs for age at puberty have been distributed to the participating breeders. The range in those EBVs is 74 and 141 days respectively, for the sires of Hereford and Angus heifers evaluated for the project. This means that the female progeny of the lowest (most desirable) age at puberty Hereford and Angus bulls would, on average, become pubertal 37 and 70 days earlier than the heifer calves of the sires with the highest age at puberty trial EBVs.

The results of this study underpin new research (the Southern Multi-Breed Project) which will involve Angus, Hereford, Wagyu, Shorthorn, Charolais and Brahman animals. This is a large MLA funded initiative, one of the focuses of which will be to improve the BREEDPLAN genetic evaluation of female reproduction traits for temperate beef breeds. This new research will be linked to the Repronomics® project in Northern Australia, which is driving the accuracy of genetic (and genomic) evaluation of female reproduction and other economically important traits for northern beef breeders.

The Trial Age at Puberty EBVs are a valuable step in helping breeders to select cattle that balance reproduction, growth and carcass merit, and other traits which contribute to overall profitability.

Truro Sherlock – 23 Supreme Exhibit Sydney, sold for \$130 000. Sire Yalgoo Peacemaker

TEMPERAMENT

In a recent survey in the US, this was ranked as the most important genetic trait by US beef producers. Yalgoo has long had a reputation for breeding quiet cattle.

Yalgoo is one of the very few whiteface studs that measure temperament. This is done by an independent assessor. The importance of this is paramount. Your cattle will generally react differently around a new face. Your bull provider's cattle are used to him/her, however they won't be there on your farm to deal with the bull on a day to day basis. By getting an independent assessor to do this we are much more likely to pick up any aggressive stock before they leave the farm.

PHENOTYPIC TRAITS

The phenotypic traits that Yalgoo select for are:

- Superior visual muscling
- Structural correctness
- Correct udder type
- Eye pigment and placement

MATURITY TYPE

Maturity type is controlled both by genetic and environmental factors. We aim to produce frame 6 bulls with positive fat cover and a medium/early maturity pattern.

We find under high stocking rates, earlier maturing cattle are more versatile and marketable.

DATA INTEGRITY

Yalgoo has a Breedplan completeness of recording rating of four and a half stars.

Our herd enjoys a high degree of performance predictability as a result of accurate BREEDPLAN EBV's. This is due to extensive testing in the following traits:

- ALL stud calves are weighed at Birth, increasing the accuracy of their birth weight EBV
- ALL stud bulls and heifers are weighed for 200, 400 and 600 day weight. Steers are weighed and recorded until they are sold. By weighing all animals we are increasing the information nucleus on each dam and creating greater herd linkage which increases BREEDPLAN accuracies
- ALL stud heifers and bulls (since 1972) have been scanned for EMA, fat depth and IMF (since 2000). Therefore our sale bulls have more accurate carcase EBV's and we are maximising the carcase information from our herd, allowing us to achieve more rapid genetic progress in carcase traits
- Mature cow weight is measured
- Independent phenotypic traits are measured including : Structure, Muscle scores & temperament
- Yalgoo was a co operator herd in the across breed NFI trial work to develop an EBV for Net Feed Intake. AGBU is currently making modifications to the NFI analysis
- By sourcing Yalgoo genetics you can be assured that any current/future economically important EBV will be measured with the greatest care and submitted correctly

MANAGING YOUR YALGOO BULL

Appropriate nutrition and paddock size must be provided when the bull is to be used in a single sire mating situation. All bulls should be examined frequently during the joining period so that signs of injury or disease can be detected and treated immediately.

NJW Trust: Keystone Sire at Yalgoo

BEEF CLASS STRUCTURAL ASSESSMENT

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

MATURE COW WEIGHT

Fertility, longevity, growth and carcase traits drive 2 of the 3 major beef herd profitability indicators in COP (Cost of production) and kgs of beef produced per DSE.

Mature cow weight has a bearing on the third; that being kg's of beef produced per hectare. Your cow herd contributes over 2 thirds of your gross pasture intake in your beef herd. Select for high 400/600 day weights and moderate mature cow weight to optimise stocking rate and maximise kgs of beef per hectare.

Please note the efficiency differences displayed in the graphs below for The Yalgoo herd compared to the breed average.

Mature Cow Weight

Yalgoo 600 v MCW

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on affect of structural improvement through out all sectors of the beef cattle industry.

2026 YALGOO SALE BULLS

The 2026 Yalgoo Sale Bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft. The Yalgoo sale bulls were assessed by Roger Evans on the 29/5/26.

HOW TO USE THE BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

The Beef Class Structural Assessment System uses a 1-9 scoring system;

- A score of 5 is ideal.
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of 2 or 8 are low scoring animals and should be looked closely before purchasing.
- A score of 1 or 9 should not be catalogued and are considered culls.

Sheath, Eye and Temperament (1 - 5)

- A higher score indicates a tighter sheath and is more favourable
- A lower score indicates a quieter animal and is more favourable
- A higher score indicates a more favourable eye settin

TECHNICAL

SUSTAINABILITY PRODUCTION INDEX

- Commercial self-replacing Hereford herd targeting the domestic market and with a strong focus on sustainability.
- Selected heifers are retained so maternal traits are important.
- Steers finished on grass.
- Steers target 300 kg carcasses with 10 mm P8 fat depth at 20 months of age.

Calving Ease Dir.	Harder	18%	Easier
Calving Ease Mat.	Harder	6%	Easier
Birth Weight	Heavier	2%	Lighter
200 Day Growth	Lighter	1%	Heavier
400 Day Weight	Lighter	2%	Heavier
600 Day Weight	Lighter	24%	Heavier
Mature Cow Weight	Lighter	16%	Heavier
Milk	Lower	5%	Higher
Scrotal Size	Smaller	0%	Bigger
Days to Calving	Longer	11%	Shorter
Eye Muscle Area	Smaller	0%	Bigger
P8 Fat Depth	Leaner	3%	Fatter
Retail Beef Yield	Lower	8%	Higher
Intramuscular Fat	Lower	4%	Higher

MSA PRODUCTION INDEX

- Commercial self-replacing Hereford herd targeting the domestic market.
- Selected heifers are retained so maternal traits are important.
- Steers grain finished in feedlot and target higher MSA grades.
- Steers target 340 kg carcasses with 12 mm P8 fat depth at 20 months of age.

Calving Ease Dir.	Harder	17%	Easier
Calving Ease Mat.	Harder	6%	Easier
Birth Weight	Heavier	4%	Lighter

Traits Observed: GL,BWT,200WT,600WT,FAT,EMA,IMF,Genomics

Notes: Super grunty, round B- muscled, moderate MAX son. Always been excited by this power bull, his dam line is superb. V227 is a great type and he has very progressive carcass data (Top 15% EMA 5% IMF). MAX and Validated compliment each other combining data and phenotype as well as any. Market/ system suitability: SM MSA F HGS BB W

Traits Observed: GL,BWT,200WT,600WT,FAT,EMA,IMF,Genomics

Notes: We had to use this soft coated Houston son out of one of our top cows. She's the definition of 'power in the blood'. Consistently, out breeds herself, with stud sires or influential daughters. Positive calving ease, high growth and high carcass. These bulls are a bit behind their mates due to a six week joining at 14mths of age in big mobs of cows. But they represent great genetic value. Market/ system suitability: MSA F EU HGS BB

It was an honour to host our ex-Prime minister and get an insight into his documentary on Australian history and the working's of our country.

CHURCHILL SMOKEY

Cutting edge outcross Genetics

Churchill Smokey was the *'must have'* combination of arguably the breed's two most dominant individuals in the US.

← SMOKEY IS THE BEST OF THESE TWO INDIVIDUALS →

Data wise Smokey is an outlier:

TRAIT	CE	BW	WW	COW FERT	MG	UDDER	TEAT	REA	MARB	BMI	BII
US RANK	4%	4%	1%	1%	1%	1%	1%	2%	3%	1%	1%

Along with his performance data, physically the bull has exceptional depth of rib, he's long, wide and expressive in his pattern. His running gear is sound with a clean sheath and large scrotum. If you want elite numbers with an elite look, get in on the ground floor of this Smokey!

DAM

BR Validated B413 is universally admired by cattlemen of all breeds for her power and function. Her total performance data and phenotype have allowed her to work well with most sires. She ranks top 1% for Marbling, EMA and all US indexes.

Recent progeny from BR Validated B413:

- \$112 259 AUD Churchill Kingdom
- \$97 290 AUD Churchill Red Thunder
- \$68 852 AUD Churchill Red Cloud
- 17 sons averaged \$31 432 AUD @ 2024 Churchill Bull Sale
- \$254 453 AUD Churchill Lady 219K
- Churchill Smokey: ½ Share @ \$145 936 AUD

SIRE

RST Final Print is unmatched in the US for his combination of low birth (Top 4%) and high growth (Top 1%). He is that rare combination of great data, phenotype and equally at home with cows or heifers. Sons and daughters have topped sales across the US.

65TH BULL SALE
Monday 10th August 2026

CHAPTER ONE - PRELIMINARY

1. (a) A vendor is bound by these terms and conditions by offering livestock for sale by auction.
(b) An agent (which includes an auctioneer) is bound by these terms and conditions by conducting an auction sale.
(c) A buyer is bound by these terms and conditions by bidding at auction.
2. (a) In these terms the expression auctioneer, agent, buyer and vendor respectively includes the servants, contractors, agents of each of them. The auctioneer, agent, buyer and vendor shall be wholly responsible for the acts and omissions of their respective servants, contractors and agents. The term 'auctioneer' includes, so far as the law and context permits, the vendor's agent.
(b) When used in these terms the expressions 'companion animals' means all animals originating from a property on a particular day.
Where lots are split and sent to multiple establishments, then all of these animals shall be regarded as companions.
3. The following applies in interpreting these terms and conditions:
 - (a) The following words have the following meanings:
Fees means all levies, charges, fees, costs and other expenses incurred or relating to these terms and conditions and the sale and purchase of livestock including, without limitation, transaction levies, yard and weigh dues, cartage, advertising and rebates, and whether paid for, or incurred, by the agent; Livestock means animals auctioned pursuant to these terms and conditions; and Price means the amount at which the lot has been sold to the buyer referred to in clause 7 of these terms and conditions
 - (i) plus any Fees and other expenses incurred in relation to the purchase of livestock that are payable by the buyer; and
 - (ii) plus any GST added in accordance with clause 12.
 - (b) These terms and conditions are subject to legislation or regulation in the State in which the auction is conducted and in the event of any conflict then the legislation or regulation will prevail. The provisions of these terms and conditions are in addition to, and do not derogate from, the duties and rights of vendors, agents and buyers set out in legislation and regulation in the State in which the auction is conducted.

CHAPTER TWO - STANDARD TERMS OF SALE

4. Subject to any reserve price, and to the right, prior to the fall of the hammer, of the vendor to withdraw any lot without declaring the reserve, the highest bidder shall be the buyer.
5. The auctioneer has the right to bid on behalf of the vendor provided that right is notified prior to the commencement of the sale and is subject to State law.
6. A bid cannot be made or accepted after the fall of the hammer unless, in accordance with clause 8, the auctioneer decides to put the lot up again.
7. The last price called by the auctioneer at the fall of the hammer shall be the amount at which the lot has been sold.
8. In the event of a disputed bid, the auctioneer is the sole arbitrator of the successful bidder or the auctioneer may decide to put the lot up again. The auctioneer's decision is final.
9. The auctioneer may refuse to accept any bid which, in the auctioneer's opinion, is not in the best interests of the vendor and need not give reasons for doing so. The minimum bid for liveweight selling is 0.2 of a cent (\$0.002).
10. A bidder shall be deemed to be a principal unless, prior to bidding, the bidder has given to the auctioneer a copy of written authority to bid for or on behalf of another person.
11. The successful bidder at a livestock auction sale must give to the auctioneer at the fall of the hammer:
 - (a) the purchaser's name; or
 - (b) the bid card number which identifies the purchaser; or
 - (c) the name of the person on whose behalf the successful bid was made; and (d) the Property Identification Code (known as the 'PIC') of destination.
12. The auction shall be conducted on the basis that the bid price shall be exclusive of Goods and Services Tax (GST). GST shall be added after the fall of the hammer for those sales subject to GST.
13. As soon as practicable after the fall of the hammer, the buyer shall, if requested by the agent, sign the agreement for sale.
14. If a buyer does not comply with any of these terms and conditions, which includes the requirements of State law, any livestock knocked down to that buyer may be re-sold by public auction or private contract in whatever lots and manner the auctioneer decides. The re-sale may be with or without notice and shall be at the buyer's risk. The buyer is responsible for all loss and expense arising out of a re-sale and is not entitled to any resulting profit.
15. The buyer of livestock must pay the agent the full amount of the purchase price in immediate funds on receipt of a tax invoice. Payment is required prior to delivery unless some other time for payment is specified in a written agreement between the buyer and the auctioneer that was made before the fall of the hammer.
16. No person may bid unless, prior to the commencement of the sale, that person has made arrangements satisfactory to the auctioneer for payment for livestock purchased. If bids in breach of this condition are inadvertently accepted, delivery shall not be given until the purchase money is paid and any law, rule or practice to the contrary is accordingly negated as far as possible.
17. (a) Cattle sold on a liveweight basis that are weighed pre-sale are at the risk and expense of the buyer upon the fall of the hammer.
(b) Cattle sold on a liveweight basis that are weighed post-sale are at the risk and expense of the buyer immediately after weighing.
(c) All livestock other than cattle sold on a liveweight basis are at the risk and expense of the buyer upon the fall of the hammer.
18. (a) Subject to this clause the sale is complete on the fall of the hammer.
(b) The time for rejection is the time commencing at the fall of the hammer and ending at the first of:
 - (i) delivery is taken by a representative of the buyer;
 - (ii) departure of the animal from the purchaser's delivery pen; or
 - (iii) one hour after the last animal is;
- a in the case of pre-sale weighing, sold; or
- b in the case of post-sale weighing, weighed.
- (c) During the time for rejection the buyer may reject any animal which is lame, blind or diseased where that condition existed prior to the fall of the hammer but could not be reasonably observed when the animal was in the selling pen.
(d) If the purchaser rejects an animal during the time for rejection then the sale of that animal is cancelled and the animal is returned to the vendor or sold at such price as the purchaser and the agent may agree.
(e) This sub-clause applies only to cattle which are sold in Queensland at auction for slaughter. The agent has responsibility for the prevention of loss or escape (but not death, sickness or injury) of those cattle from the time of the fall of the hammer, through delivery to and from the scales, to the buyer's delivery pen and on to the buyer's nominated transport. This responsibility ends at the earlier of those cattle boarding the buyer's nominated transport or sunset on the day after the sale. This sub-clause does not apply if the agent makes an announcement to that effect prior to sale.
19. (a) Subject to the right of rejection in Clause 18, all conditions and warranties expressed or implied by law are hereby excluded from the sale to the extent that the law allows. All lots are open for inspection prior to the commencement of the sale and are sold with all faults, if any. No compensation shall be given for any faults, imperfections, errors of description, number in or of any lots sold or otherwise.
(b) Any claim or objection arising out of an error or misdescription in the provision of relevant information in terms of legislation or regulation concerning the National Livestock Identification Scheme (NLS) must be made by 5:00pm on the seventh day after the fall of the hammer. No objection, requisition or claim against the vendor or agent in respect of such error or misdescription can be made after that time.
(c) Any statements made by the vendor or the auctioneer whether in writing or orally to the effect that any female has been pregnant tested or scanned positive shall mean and require only that a certificate in writing shall be supplied to the buyer signed by a qualified veterinary surgeon or certified scanner certifying that the said female has been tested or scanned on the date specified in the certificate and that in the opinion of the surgeon or scanner the female was pregnant on that date.
(d) For cattle, the agent undertakes to make every reasonable effort to ensure that any NLS cattle device number is transferred from the saleyard account to the purchasers account on the NLS database no later than midnight on the day of the sale.
(e) Where livestock have a food safety or market eligibility status derived from the NVD and/or the NLS/ERP database, the agent will inform the buyers by presale catalogue in conjunction with vendor branding and/or announce the status prior to the offering of those lots.
20. If delivery is made to, or possession obtained by, the buyer or its representative before full payment of the Price, then until full payment is received, the buyer:
 - (a) does not acquire title to the livestock;
 - (b) holds the livestock as bailee only for the vendor;
 - (c) must act in a fiduciary capacity in its relationship with the vendor;
 - (d) must store the stock separately or so that they are readily distinguishable from other livestock owned by the buyer;
 - (e) is responsible for the safety and well being of the livestock;
 - (f) may make a bona fide sale for market value of any or all of the livestock. As between the buyer and the subsequent buyer, the sale shall be made by the buyer in its own name and not as agent for the vendor, however as between the vendor and buyer, the sale shall be made as bailee and agent for the vendor; and
- (g) must keep and account for the proceeds of any subsequent sale separately from its other money and hold those proceeds, together with the benefits of any rights against subsequent buyers, on trust for the vendor.
21. In addition to clause 20, if payment is not made according to clause 15, but delivery has been made to, or possession obtained by, the buyer or its representative:
 - (a) The vendor or its agent may repossess and resell the livestock and enter property owned or occupied by the buyer or its representative if necessary to do so; and
 - (b) Interest may be charged at the rate usually charged by the agent for overdue accounts on any amounts which remain owing at any time.
22. The buyer may not make any claim against the vendor for actions by the vendor or its agent under clauses 20 or 21 and indemnifies the vendor and its agent against any loss, damage, costs, expenses, penalties, fines or claims suffered by the vendor, the agent or any person or entity arising from the vendor exercising its rights under clauses 20 or 21.
- 23.1 Clause 23 applies whenever the agent pays the vendor before being paid by the buyer, which the agent is not bound to do. The agent is then the del credere agent of the vendor at law.
- 23.2 The vendor hereby gives notice to the buyer of the assignments referred to in clause 23.3.
- 23.3 When this clause applies, in addition to any rights of the agent that arise by operation of the law, the parties agree that, subject to clause 23.6 the agent is subrogated to all rights of the vendor under these terms and conditions against the buyer.
- 23.4 Title to the livestock does not pass to the agent or a nominee of the agent unless the agent, by written notice to the vendor, notifies the vendor that it is to be transferred to the agent or a nominee of the agent.
- 23.5 The vendor acknowledges that the agent may take enforcement, repossession or other action to recover any livestock for which the buyer has not paid in full, or the Price of such livestock, owing by the buyer under these terms and conditions:
 - (a) when this clause does not apply, as agent of the vendor (including by reselling the livestock); and

- (b) when this clause applies, on the agent's own behalf exercising the rights of the vendor by subrogation or assignment under these terms and conditions (whether in the vendor's name or not) and, where title to the livestock has not passed to the agent, by selling the livestock as agent of the vendor without the agent having to account to the vendor for the proceeds of sale.
- 23.6 The agent may at any time, assign, transfer, securitise or otherwise dispose of all or any of its rights under these terms and conditions and any debts created pursuant to it (including, without limitation, the rights assigned to it under clause 23.3).
- 23.7 The vendor hereby irrevocably appoints the agent as the vendor's attorney to:
 - (a) do at any time and in any manner as the agent thinks fit all acts necessary or desirable to perfect or improve the rights and interests afforded, or intended to be afforded, to the agent under these terms and conditions; and
 - (b) appoint one or more sub-attorneys to do anything that the agent may do as the vendor's attorney.
- 23.8 These terms and conditions do not render the agent liable to the buyer as vendor nor entitle the buyer to set off against the agent any right the buyer may have against the vendor or otherwise.
- 23.9 The buyer acknowledges that the provisions of this clause 23 are intended solely for the benefit of the agent (and its assigns) and the vendor. The liabilities and obligations of the buyer will not be in any way affected:
 - (a) by this clause 23, other than as it expressly provides; or
 - (b) by the failure of the agent or the vendor or either of them to comply with the terms of this clause 23.
- 23.10 The buyer must pay all amounts payable to the vendor or the agent under these terms and conditions without any deduction, withholding, set off or counterclaim whatsoever, whether the benefit of a deduction, withholding, set off or counterclaim is alleged to exist in favour of the buyer as against the vendor or the agent in any capacity whatsoever or any other person including any assignor of the vendors or the buyers interests under these terms and conditions.
24. (a) The agent agrees that he is liable to pay to the vendor the Price, less such commission as is agreed between the vendor and the agent, and in the absence of any agreement such amount as is reasonable, and less the Fees that are payable by the vendor that were incurred by the agent on behalf of the vendor in relation to the sale of the livestock.
(b) In the event that the buyer pays the Price or part of it direct to the vendor then the agent has no liability to the vendor for the amount of such payment. Further, if the agent pays the vendor any amount which the buyer also pays direct to the vendor in respect of the same livestock, then the vendor must repay the agent that amount and the agent may debit that amount to an account held in the name of the vendor by the agent.
(c) Regardless of whether or not a sale has occurred the agent may, but is not under obligation so to do, instead of deducting payments owed to it by the vendor, debit the amount of the commission and fees to an account held in the name of the vendor by the agent.
25. The auctioneer has been retained by the vendor as auctioneer for the purpose of selling the livestock comprised in the lots. The terms of engagement between the auctioneer and the vendor do not extend to the provision of advice by the auctioneer to the vendor in relation to the safety or otherwise of the sale ring, the saleyards and the surrounding environments.

CHAPTER THREE - VENDOR WARRANTY FOR CORRECT PRESENTATION AND DECLARATION

26. This chapter applies only in the case of livestock and their companion animals sold at auction for slaughter when the buyer is the slaughterer and the livestock are transported direct from the sale yard to the meatworks at which they are slaughtered. This chapter does not apply if the buyer is a trader who subsequently resells the livestock to a slaughterer. A slaughterer is any person who pays the AMPC Processor levy.
27. The warranty of a vendor is that livestock and their companion animals offered for sale at auction:
 - (a) pass AQIS and other regulatory authority requirements and inspections at the time of slaughter;
 - (b) are of merchantable quality;
 - (c) carry an NLS device in accordance with State law;
 - (d) in the case where a representation has been made in the pre-sale catalogue that the livestock have particular characteristics or are fit for a particular purpose or market, and such representations are based on information in the National Vendor Declaration, the livestock will have those characteristics or will be fit for the particular purpose or market; and
 - (e) all information in any National Vendor Declaration provided by the vendor is true, complete and correct in all material respects.
28. In the event of a breach by the vendor of the vendor's warranty and provided such breach is notified by the buyer to the agent by 5:00pm on the 7th day after the fall of the hammer then the buyer is not liable to pay the portion of the Price of such of the vendor's livestock to which the breach applies.
29. However if the breach by the vendor is such that the livestock are not rejected outright but are instead downgraded then the buyer will pay the value of the livestock at their next highest and best use.
30. In the case of a breach by the vendor of the vendor's warranty then the vendor will also be liable to the buyer for any further losses which the buyer might establish but the buyer will take all reasonable steps in co-operation with the agent and vendor to mitigate both the effect of the breach and the amount of any loss.
31. Where a sentinel animal of a lot tests positive for chemical residue, and provided such test is certified and notified as required by these vendor warranty terms, then:
 - (a) the buyer will be entitled to delay payment for the price of all livestock in that lot; or
 - (b) the vendor has the option, at the vendor's cost, of collecting the companion animals and returning them to the vendor's property; or of having the livestock slaughtered in which event the risk of further condemnations will be that of the vendor. Where product integrity is potentially jeopardised, the Processor has the right to refuse slaughter and send the livestock back to the consigning property at the vendor's cost.
32. The auctioneer is liable to the buyer in respect of any breach of the vendor's warranty arising out of:
 - (a) any error, by the auctioneer, of transcription of information from the National Vendor Declaration completed by the vendor to the pre-sale catalogue or the buyers post-sale summary;
 - (b) any failure by the auctioneer to notify the buyer, prior to bidding, of any breach by the vendor of the warranty of the vendor if the buyer establishes that the agent knew of such breach prior to the sale; and
 - (c) any failure by the auctioneer to disclose prior to bidding, and in the pre-sale catalogue, that the vendor has failed to provide a National Vendor Declaration that is complete in all material aspects.

CHAPTER FOUR - OWNERS RISK FOR CONDITION OF CATTLE

33. This chapter applies only in the case of cattle and their companion animals sold at auction for slaughter when the buyer is the slaughterer and the cattle are transported direct from the sale yard to the meatworks at which they are slaughtered. This chapter does not apply if the buyer is a trader who subsequently resells cattle to a slaughterer. A slaughterer is any person who pays the AMPC Processor levy.
34. Owners risk reflects the producer's responsibility to provide slaughter cattle for sale that are fit for human consumption. Cattle are fit for human consumption if they are not condemned as unfit by AQIS. Owners risk applies if the condemnation is due to a condition in the animal which the buyer establishes, by the AQIS certificate, existed prior to the fall of the hammer.
35. A buyer with the benefit of owners risk protection is not liable to pay the Price of that animal to the vendor. The buyer remains nevertheless liable for all costs incurred after the fall of the hammer in transport, slaughter, testing and disposal of the animal.
36. Owners risk protection is available to the buyer of cattle to which this chapter applies if all of the following are satisfied:
 - (a) a certificate is issued by AQIS which states the relevant NLS RFID tag number and PIC, the date of the certificate, the reason for condemnation and that the reason for condemnation existed prior to the fall of the hammer;
 - (b) the certificate is received by the selling agent either in its original form or by fax by 5:00pm on the 7th day after the fall of the hammer; and
 - (c) if the condemnation is due to chemical residue the certificate follows testing in an AQIS approved laboratory which establishes maximum residue limits in excess of the Australian limit.
37. Owners risk does not apply, and the buyer must pay for the cattle, if the reason for condemnation is any of the following:
 - (a) bruising,
 - (b) fever,
 - (c) partial condemnation, or
 - (d) emaciation.

CHAPTER FIVE - NOTICES REQUIRED BY STATE LEGISLATION

NSW Legislation

Property, Stock and Business Agents Act 2002 Warnings Penalties for collusive practices. It is an offence against the Property, Stock and Business Agents Act 2002 for a person to do any of the following as a result of a collusive practice, or to induce or attempt to induce another person by a collusive practice to do any of the following:

- (i) to abstain from bidding; or
- (ii) to bid to a limited extent only; or
- (iii) to do any other act that might prevent free and open competition.

Severe penalties may be imposed on persons convicted of collusive practices. The auctioneer has the right to make one bid on behalf of the vendor if the auctioneer clearly and precisely announces that fact prior to the sale.

Tasmanian Legislation

The auctioneer must not appear to acknowledge a dummy bid. A buyer must not give, agree to give or offer a gift or other consideration to a person for abstaining from bidding and a person must not accept any gift or consideration for abstaining from bidding.

A person must not participate in collusive practices by way of making or receiving an unlawful promise to abstain from bidding, not to bid except to a limited extent or do any other thing which may prevent free and open competition.

Western Australian Legislation - Auction Sales Act 1973 s31 NOTICE

It is an offence to:

- (i) induce or attempt to induce another person to abstain from bidding by means of a promise, expressed or implied, that the other person will have the right to elect to take over as buyer or to toss or draw lots to establish who is to become the owner;
- (ii) abstain or agree to abstain from bidding as a result of such a promise;
- (iii) knowingly enter or permit or cause to be entered in the auctioneer's record any name other than that of the actual successful bidder;
- (iv) enter in the auctioneer's record the name of the buyer other than that of the actual successful bidder; or
- (v) in the case of successful bidder supply wrong information as to the name of the buyer to the auctioneer or to any person, firm or corporation on whose behalf the sale is conducted. The vendor, or any person on behalf of the vendor, or the auctioneer have the right to make no more than three bids.
